Sensorimotor-Focused

EMDR Arthur O'Malley, 2018-12-14 Sensorimotor Focused EMDR combines two hugely influential and effective therapies EMDR therapy and sensorimotor psychotherapy to provide a new approach In doing so the book supports the widely held view of psychotherapists that in trauma the primary store of neurological information is somatic rather than cognitive Many therapists trained in EMDR find that additional resources are needed for patients who present with symptoms of complex trauma and dissociation This is because EMDR is primarily a top down approach based on CBT with the addition of bilateral stimulation BLS in visual tactile and auditory modalities By contrast Sensorimotor Focused EMDR takes a body based and bottom up approach that seeks to resolve trauma by reprocessing information at multiple levels in the gut brain the heart brain and the head brain as well as in the endocrine immune and nervous systems Fully revised since The Art of BART 2015 the book looks at the latest advances in neuroscience including research into the effectiveness of psychotherapy and the mysteries of consciousness and the development of mind It also looks at the role of newly discovered organs the mesentery and the interstitium and provides clear anatomical evidence for the communication of biophotons in energy channels known as the primo vascular system SF EMDR is the only therapy that fully integrates Western theories of affective neuroscience with Eastern observations on activation of chakras pranas and energies and in doing so it offers strong potential for enhanced outcomes and optimized performance for patients Palmer's Index to the Times Newspaper ,1914 Who's who in Commerce and Industry ,1965 **American Aeronaut** ,1963
