Towards Affordance-Based Robot Control Erich Rome, Joachim Hertzberg, Georg Dorffner, 2008-02-11 Today's mobile robot perception is insufficient for acting goal directedly in unconstrained dynamic everyday environments like a home a factory or a city Subject to restrictions in bandwidth computer power and computation time a robot has to react to a wealth of dynamically changing stimuli in such environments requiring rapid selective attention to decisive action relevant information of high current utility Robust and general engineering methods for effectively and efficiently coupling perception action and reasoning are unavailable Interesting performance if any is currently only achieved by sophisticated robot programming exploiting domain features and specialties which leaves ordinary users no chance of changing how the robot acts The purpose of this volume outcome of a GI Dagstuhl Seminar held in Dagstuhl Castle in June 2006 is to give a first overview on the concept of affordances for the design and implementation of autonomous mobile robots acting goal directedly in a dynamic environment The aim is to develop affordance based control as a method for robotics The potential of this new methodology will be shown by going beyond navigation like tasks towards goal directed autonomous manipulation in the project demonstrators

An Invitation to 3-D Vision Yi Ma, Stefano Soatto, Jana Kosecká, S. Shankar Sastry, 2012-11-06 This book is intended to give students at the advanced undergraduate or introductory graduate level and researchers in computer vision robotics and computer graphics a self contained introduction to the geometry of three dimensional 3 D vision This is the study of the reconstruction of 3 D models of objects from a collection of 2 D images An essential prerequisite for this book is a course in linear algebra at the advanced undergraduate level Background knowledge in rigid body motion estimation and optimization will certainly improve the reader's appreciation of the material but is not critical since the first few chapters and the appendices provide a review and summary of basic notions and results on these topics Our motivation Research monographs and books on geometric approaches to computer vision have been published recently in two batches The first was in the mid 1990s with books on the geometry of two views see e g Faugeras 1993 Kanatani 1993b Maybank 1993 Weng et al 1993b The second was more recent with books focusing on the geometry of multiple views see e g Hartley and Zisserman 2000 and Faugeras and Luong 2001 as well as a more comprehensive book on computer vision Forsyth and Ponce 2002 We felt that the time was ripe for synthesizing the material in a unified framework so as to provide a self contained exposition of this subject which can be used both for pedagogical purposes and by practitioners interested in this field
