functional near infrared spectroscopy fNIRS and stimulation approaches like transcranial direct current stimulation tDCS have made significant progress in both recording and altering brain activity while allowing full body movements outside laboratory environments For neuroergonomics the application of brain imaging in real world scenarios is highly relevant Traditionally brain imaging experiments in human factors research tend to avoid active behavior for fear of artifacts and a contaminated data set that would provide limited insight into brain dynamics in real working environments To overcome these problems new analyses approaches have to be developed that identify artifacts resulting from hostile recording environments and movement related non brain activity stemming from eye head and full body movements The application of methodology from the field of Brain Computer Interfacing BCI for neuroergonomics is one approach that has significant potential to enhance ambulatory monitoring and applied testing Passive BCIs allow for assessing aspects of the user state online such that systems can automatically adapt to their user This neuroadaptive technology could lead to highly efficient working environments to auto adaptive experimental paradigms and to a continuous tracking of cognitive and affective aspects of the user state Hence deployment of portable neuroimaging technologies to real time settings could help assess cognitive and motivational states of personnel assigned to perform critical tasks This Research Topic gathers submissions that cover new approaches in neuroergonomics Different article type cover advanced neuroscience methods and neuroergonomics techniques as well as analysis approaches to investigate brain dynamics in working environments The selection of papers provides insights into new neuroergonomic research approaches that demonstrate significant advances in brain imaging technologies that become more and more mobile Moreover a strong trend for new analyses approaches and paradigms investigating real work settings can be seen Together this unique collection of latest research papers provides a comprehensive overview on the latest developments in neuroergonomics
