The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution: air, water, soil, and noise. Because pollution is a direct or indirect consequence of waste, the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste. However, as long as waste continues to exist, we can only attempt to abate the subsequent pollution by converting it to a less noxious form. Three major questions usually arise when a particular type of pollution has been identified: 1. How serious is the pollution? 2. Is the technology to abate it available? and 3. Do the costs of abatement justify the degree of abatement achieved? This book is one of the volumes of the Handbook of Environmental Engineering series. The principal intention of this series is to help readers formulate answers to the last two questions above. The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control. However, the realization of the ever-increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken. **93**

The P-39 Airacobra was designed by Bell's brilliant engineer Robert Woods. The plane featured a mid-engine design intended to allow it to carry a lethal 37mm cannon in the nose. An all-metal low-wing design, the P-39 was the first fighter to feature tricycle landing gear. The plane debuted in 1939 and proved impressive in tests. Yet the aircraft lacked a large fuel capacity that limited range, and pilots learned that its performance dropped off markedly at altitudes above 17,000 feet. Despite this, over 9,500 P-39s were built. Almost half were sent to the USSR, where Soviet pilots flying low-level attack missions achieved devastating results. Ace Alexander Pokryshkin flew the plane exclusively and scored nearly 60 kills. Originally printed by the USAAF and the RAF, this handbook provides a fascinating glimpse inside the cockpit of this warbird. Originally classified Restricted, the manual was declassified and is here reprinted in book form. **Motor Imported Car Repair Manual**, 1983
