Vauxhall Corsa Usa:

On a Global Mission: The Automobiles of General Motors International Volume 3 Louis F. Fourie, 2016-12-27
Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

Transport, Climate Change and the City Robin Hickman, David Banister, 2014-02-05. Sustainable mobility has long been sought after in cities around the world, particularly in industrialised countries but also increasingly in the emerging cities in Asia. Progress, however, appears difficult to make as the private car still largely fuelled by petrol or diesel remains the mainstream mode of use. Transport is the key sector where carbon dioxide CO₂ emissions seem difficult to reduce. Transport, Climate Change and the City seeks to develop achievable and low transport CO₂ emission futures in a range of international case studies including in London, Oxfordshire, Delhi, Jinan and Auckland. The aim is that the scenarios as developed and the consideration of implementation and governance issues can help us plan for and achieve attractive future travel behaviours at the city level. The alternative is to continue with only incremental progress against CO₂ reduction targets to sleepwalk into climate change difficulties, oil scarcity, a poor quality of life and to continue with the high traffic casualty figures. The topic is thus critical with transport viewed as central to the achievement of the sustainable city and reduced CO₂ emissions.
