Sharp, Gerhard Ersdal, 2021-04-01 UNDERWATER INSPECTION AND REPAIR FOR OFFSHORE STRUCTURES Benefit from a much needed up to date handbook on underwater inspection and repair processes and technologies Underwater Inspection

and Repair for Offshore Structures fills a gap in the literature to provide an overview of the inspection and repair processes for both steel and concrete offshore structures. Authors and noted experts on the topic John V Sharp and Gerhard Esdal guide readers through the reasons why inspection and repair are performed and how both are linked to the management of structural integrity, statutory requirements and various types of damage. The book addresses critical topics including the execution and planning of inspection and repair, the tools and methods used and their deployment underwater. The authors put particular focus on steel and concrete offshore oil and gas installations but the content is also applicable to the substructures of offshore wind turbines. Underwater Inspection and Repair for Offshore Structures is complementary to the authors' book Ageing and Life Extension of Offshore Structures also from Wiley. This important book covers current inspection and monitoring techniques to evaluate existing structures. Includes coverage of robotic ROV inspection and repair methods. Provides an overview of repair and maintenance techniques applicable to the splash zone and underwater operations. Written for engineers, designers and safety auditors working with offshore structures. Underwater Inspection and Repair for Offshore Structures is a comprehensive resource for understanding how to effectively inspect and repair these vulnerable structures.

*Steel Shipbuilding* Kai Turing, AI, 2025-02-19. Steel shipbuilding, a complex feat of engineering, relies on advanced principles, modern welding techniques and stringent design standards. This book, *Steel Shipbuilding*, explores how these elements ensure the structural integrity and longevity of vessels navigating demanding maritime environments. From the evolution of steel alloys to the intricacies of welding, the book reveals the science behind constructing massive steel ships capable of withstanding immense ocean pressures. Discover how material advancements like the shift from iron to high strength alloys have revolutionized shipbuilding, impacting operational safety and efficiency. The book methodically progresses, first introducing the properties of steel alloys, then detailing welding processes such as submerged arc welding, laser welding and friction stir welding. The final section delves into design specifications mandated by classification societies. Case studies throughout illustrate real world applications of the principles discussed. Emphasizing the integration of material science, welding methodologies and design standards, this book provides a balanced approach valuable to engineers and policymakers alike, offering a comprehensive reference for professionals in naval architecture, marine engineering and related fields.

**Investing in Quality** Michael T. Buelsing, 2016 The quality of Caterpillar's welds is becoming increasingly important as their equipment is made leaner with the goals of increased performance lighter weight and lower unit cost Due to the inherently variable nature of arc welding non destructive weld evaluation is critical to ensure that welding processes remain in control and that defective parts are quarantined and repaired before being released downstream The conventional ultrasonic weld inspection technology in use at present has several limitations Areas within common joint configurations cannot be adequately inspected due to geometry constraints Discontinuity evaluation requires subjective real time human interpretation by highly trained operators The data produced by the instrumentation is unsuitable to recording for off line analysis Imprecise defect sizing leads to Type I and Type II inspection errors the unnecessary rework of good parts and the inappropriate release of non complying parts This project addressed these limitations of conventional ultrasonic weld inspection by identifying and evaluating alternative commercially available technologies and by initiating the internal development of specific proprietary technologies tailored to Caterpillar's needs Through collaboration with Caterpillar's non destructive evaluation NDE community as well as outside vendors a technology known as phased array was selected and validated in the laboratory and production environments Although phased array was not new to Caterpillar its adoption within the production facilities had previously been limited
