Integrated Circuit and System Design. Power and Timing Modeling, Optimization and Simulation Jorge Juan Chico, Enrico Macii, 2003-10-02 Welcome to the proceedings of PATMOS 2003 This was the 13th in a series of international workshops held in several locations in Europe Over the years PATMOS has gained recognition as one of the major European events devoted to power and timing aspects of integrated circuit and system design Despite its significant growth and development PATMOS can still be considered as a very informal forum featuring high level scientific presentations together with open discussions and panel sessions in a free and relaxed environment This year PATMOS took place in Turin Italy organized by the Politecnico di Torino with technical co sponsorship from the IEEE Circuits and Systems Society and the generous support of the European Commission as well as that of several industrial sponsors including BullDAST Cadence Mentor Graphics STMicroelectronics and Synopsys The objective of the PATMOS workshop is to provide a forum to discuss and investigate the emerging problems in methodologies and tools for the design of new generations of integrated circuits and systems A major emphasis of the technical program is on speed and low power aspects with particular regard to modeling characterization design and architectures

Ultra-Low Energy Domain-Specific Instruction-Set Processors Francky Catthoor, Praveen Raghavan, Andy Lambrechts, Murali Jayapala, Angeliki Kritikakou, Javed Absar, 2010-08-05 Modern consumers carry many electronic devices like a mobile phone digital camera GPS PDA and an MP3 player The functionality of each of these devices has gone through an important evolution over recent years with a steep increase in both the number of features as in the quality of the services that they provide However providing the required compute power to support an uncompromised combination of all this functionality is highly non trivial Designing processors that meet the demanding requirements of future mobile devices requires the optimization of the embedded system in general and of the embedded processors in particular as they should strike the correct balance between flexibility energy efficiency and performance In general a designer will try to minimize the energy consumption as far as needed for a given performance with a sufficient flexibility However achieving this goal is already complex when looking at the processor in isolation but in reality the processor is a single component in a more complex system In order to design such complex system successfully

critical decisions during the design of each individual component should take into account effect on the other parts with a clear goal to move to a global Pareto optimum in the complete multi dimensional exploration space In the complex global design of battery operated embedded systems the focus of Ultra Low Energy Domain Specific Instruction Set Processors is on the energy aware architecture exploration of domain specific instruction set processors and the co optimization of the datapath architecture foreground memory and instruction memory organisation with a link to the required mapping techniques or compiler steps at the early stages of the design By performing an extensive energy breakdown experiment for a complete embedded platform both energy and performance bottlenecks have been identified together with the important relations between the different components Based on this knowledge architecture extensions are proposed for all the bottlenecks

Finite Elements in Civil Engineering Applications M.A.N. Hendriks,J.A. Floating Gate Devices: Operation and Compact Modeling Paolo Pavan,Luca Larcher,Andrea Marmiroli,2004-02-29 Floating Gate Devices Operation and Compact Modeling focuses on standard operations and compact modeling of memory devices based on Floating Gate architecture Floating Gate devices are the building blocks of Flash EPROM EEPROM memories Flash memories which are the most versatile nonvolatile memories are widely used to store code BIOS Communication protocol Identification code and data solid state Hard Disks Flash cards for digital cameras The reader who deals with Floating Gate memory devices at different levels from test structures to complex circuit design will find an essential explanation on device physics and technology and also circuit issues which must be fully understood while developing a new device Device engineers will use this book to find simplified models to design new process steps or new architectures Circuit designers will find the basic theory to understand the use of compact models to validate circuits against process variations and to evaluate the impact of parameter variations on circuit performances Floating Gate Devices Operation and Compact Modeling is meant to be a basic tool for designing the next generation of memory devices based on FG technologies

Scientific and Technical Aerospace Reports ,1994 **Users Guide to Physical Modelling and Experimentation** Lynne E.

Frostick,Stuart J. McLelland,T.G. Mercer,2011-05-20 A Users Guide to Hydraulic Modelling and Experimentation provides a systematic comprehensive summary of the progress made through HYDRALAB III The book combines the expertise of many of the leading hydraulic experimentalists in Europe and identifies current best practice for carrying out state of the art modern laboratory investigations In addition it gives an inventory and reviews recent advances in instrumentation and equipment that drive present and new developments in the subject The Guide concentrates on four core areas waves breakwaters sediments and the relatively new but rapidly developing cross disciplinary area of hydrodynamics ecology

Progress made through the CoMIBBS component of HYDRALAB III provides the material for a chapter focussed on guidance principles and practice for composite modelling There is detailed consideration of scaling and the degree of relevance of laboratory physical modelling approaches for specific contexts included in each of the individual chapters The Guide includes outputs from the workshops and several of the innovative transnational access projects that have been supported within HYDRALAB III as well as the focussed joint research activities SANDS and CoMIBBS Its primary purpose is to serve as a shared resource to disseminate the outstanding advances achieved within HYDRALAB III but even more than this it is a tribute to the human and institutional collaborations that led to and sustained the research advances the human relationships that were strengthened and initiated through joint participation in the Programme and the training opportunities that participation provided to the many young researchers engaged in the projects

Benoît Bissonnette,Luc Courard,David W. Fowler,Jean-Louis Granju,2011-03-16 Among different approaches that can be considered for concrete rehabilitation bonded overlays are often the most economical alternative The primary purpose of overlays is to extend the life of the candidate structures either by restoring the quality and integrity of the surface and or the re establishing or improving the load carrying capacity Nevertheless the durability of bonded overlay systems still draws concerns in the technical community because of bond sustainability problems encountered in a number of cases At this time there is still no accepted design approach or methodology that can warrant the practitioner a successful outcome of the repair This State of Art report summarizes the findings with respect to all aspects involved in the overlaying process
