expert system called SHYSTER has been developed to demonstrate that a useful legal expert system can be based upon a pragmatic approach to the law SHYSTER has a simple representation structure which simplifies the problem of knowledge acquisition Yet this structure is complex enough for SHYSTER to produce useful advice SHYSTER is a case based legal expert system although it has been designed so that it can be linked with a rule based system to form a hybrid legal expert system Its advice is based upon an examination of and an argument about the similarities and differences between cases SHYSTER attempts to model the way in which lawyers argue with cases but it does not attempt to model the way in which lawyers decide which cases to use in those arguments Instead it employs statistical techniques to quantify the similarity between cases It decides which cases to use in argument and what prediction it will make on the basis of that similarity measure SHYSTER is of a general design it can provide advice in areas of case law that have been specified by a legal expert using a specification language Hence it can operate in different legal domains Four different and disparate areas of law have been specified for SHYSTER and its operation has been tested in each of those domains Testing of SHYSTER in these four domains indicates that it is exceptionally good at predicting results and fairly good at choosing cases with which to construct its arguments SHYSTER demonstrates the viability of a pragmatic approach to legal expert system design
