Exposing the Film Apparatus Giovanna Fossati, Annie Oever, 2025-10-01 Film archives have long been dedicated to preserving movies and they've been nimble in recent years in adapting to the changing formats and technologies through which cinema is now created and presented. This collection makes the case for a further step: the need to see media technologies themselves as objects of conservation, restoration, presentation and research in both film archives and film studies. Contributors with a wide range of expertise in the film and media world consider the practical and theoretical challenges posed by such conservation efforts and consider their potential to generate productive new possibilities in research and education in the field.

Agronomic Crops Mirza Hasanuzzaman, 2019-11-23 Agronomic crops have provided food, beverages, fodder, fuel, medicine and industrial raw materials since the beginning of human civilization. More recently, agronomic crops have been cultivated using scientific rather than traditional methods. However, in the current era of climate change, agronomic crops are suffering from different environmental stresses that result in substantial yield loss. To meet the food demands of the ever-increasing global population, new technologies and management practices are being adopted to boost yields and maintain productivity under both normal and adverse conditions. Further, in the context of sustainable agronomic crop production, scientists are adopting new approaches such as varietal development, soil management, nutrient and water management and pest management. Researchers have also made remarkable advances in developing stress tolerance in crops. However, the search for appropriate solutions for optimal production to meet the increasing food demand is still ongoing. Although there are several publications on the recent advances in these areas, there are few comprehensive resources available covering all of the recent topics. This timely book examines all aspects of production technologies, management practices and stress tolerance of agronomic crops.
