

PSYCHOLOGY

DSM-V Abnormal

Essentials including mental illness, medical & behavioral models, psychological perspective, diagnostic classification & DSM-V classifications

MENTAL ILLNESS

CRITERIA & DEFINITIONS

- Statistical models:** "Normality" is what a majority (e.g., 68%) of the population exhibits, based on a statistical normal curve.
- Societal expectations:** "Normality" is conformity to sociological roles.
- Consensus of opinions of experts:** Experts (namely, psychologists and psychiatrists) stipulate what is normal.
- Subjective discomfort:** The person admits to a problem.
- Social or vocational incapacity:** The inability to function in societal or work-defined roles.
- Misinterpretation of reality:** The person is out of touch with or distorting perceived reality.
- Immaturity:** The person's maturity level is below the degree of what is expected at specified age or social milieu.

NOTE: No single criterion for mental illness can describe all types of abnormalities. Defining mental illness relative to social norms or maladaptive behaviors invariably commits one to making a normative (i.e., value) judgment that one's societal norms are correct. Hence, all definitions of mental illness invariably become theory-laden.

Thomas Szasz's Objection

The concept of mental illness is a socially constructed myth for the purpose of advancing certain social and political agendas. Clinical psychology is an instrument of repression to enforce conformity and stigmatize nonconformist and deviant people with the label "mentally ill."

Reznek's Definition of Mental Illness

Something is a mental illness if and only if it is an abnormal and involuntary process that does mental harm and should best be treated by medical means.

NOTE: "Abnormality" is used in the constructivist (i.e., normative) sense and not in the statistical or idealistic sense, inasmuch as society determines what is acceptable normal behavior.

THE MEDICAL MODEL

CAUSAL FACTORS

- Primary cause:** The agent believed to have initially caused the disease. In the medical model, the primary cause is assumed to be a virus, bacteria, a chemical toxin such as lead poisoning, a genetic inheritance, a chemical disorder, or a structural brain pathology.
- Predisposing cause:** The organism is predisposed to disease under some circumstances (e.g., alcoholism).
- Precipitating cause:** A specific event or factor triggers the onset of the disease (e.g., it is suspected that Alzheimer's disease has an environmental precipitating cause).
- Reinforcing cause:** A factor that maintains the disease (e.g., severe stress may reinforce the need for narcotic opiates); environmental chemicals may also reinforce the disease.

Methodology

1. Describe symptoms
2. Diagnose (identify specific pathology)
3. Etiology (probable cause of disease)
4. Prescribe treatment
5. Prognosis (expected course of disease)

BASIC TERMINOLOGY

- Symptoms:** The behaviorally manifest signs of a disorder.
- Syndromes:** A collection of symptoms that identifies a disease.
- Acute:** A disorder that has a sudden onset but is short-lived.
- Chronic:** A persistent, long-lasting disorder.

CAUSES OF DISORDERS

- Chemical imbalance:** usually of certain brain chemicals (e.g., it is suspected that an imbalance in the neurotransmitter serotonin plays a causal role in the onset of schizophrenia).
- Infection by microorganisms** (e.g., syphilis; paresis is thought to be caused by the bacteria that initially infected the subject with syphilis, resulting in the subsequent dementia).
- Genetic mutations or predispositions** (e.g., manic-depressive illness is thought to have a genetic predisposing factor).
- Constitutional weakness** (i.e., the organism may have an enduring biological defect that predisposes it to some illness).
- Physical deprivations**, such as lack of sleep, malnutrition, and the like.
- Brain pathology**, such as a physical brain disorder, either congenital or traumatic (e.g., a head injury).

PSYCHOLOGICAL PERSPECTIVE

As humans attempt to adapt to their environment, maladaptive behavior causes abnormal behavior. The psychological perspective assumes that both normal and abnormal adaptive patterns are learned, not inherited. Thus, treatment consists of substituting healthy adaptive behaviors for maladaptive behaviors. The goal of this approach is to explain abnormality in terms of inefficient and ineffective coping mechanisms. A psychological treatment works only if the patient actively participates in the treatment; the approach is usually ineffective in the case of involuntary institutionalization.

GENERAL CAUSES OF ABNORMALITY

- These merely predispose persons to abnormal behavior:
 - Maternal deprivation:** Especially orphans who are institutionalized or are abandoned by their natural parents.
- Pathological family patterns:** Maladaptive family behavior (e.g., faulty role model) that the child imitates and internalizes or a faulty relationship between parent and child (e.g., overprotective, domineering, alcoholic, or emotionally abusive parents).
- Psychic trauma:** Especially in the psychoanalytic view; for example, an early childhood traumatic experience (e.g., abandonment, death or divorce, sexual abuse) is expressed and then resurfaces later as a disorder.

CLASSIFICATION & DIAGNOSIS

Diseases are classified and identified by reference to symptoms and behavior deviating from normal. The major categorizing reference for the classification of mental disorders is The *Diagnostic and Statistical Manual of Mental Disorders (DSM-V)*. Note that disorders in the DSM are sometimes classified unreliable and are invalid for diagnostic agreement among psychiatrists. With the exception of the diagnosis of manic-depressive illness, the interobserver diagnostic reliability of the DSM is poor. People labeled by DSM classifications are often stigmatized for life.

ASSESSMENT TECHNIQUES

Assessment is the process of identifying the nature and severity of the condition, formulating treatment goals, and evaluating the effect of the treatment. It includes:

- Medical evaluation
- Personality and environmental variables
- Interviews with the patient
- Psychological tests and rating scales
- Direct observation of behavior

TREATMENTS

- **Psychosurgery:** Partial or total frontal lobotomy or other procedure wherein brain tissue is severed or excised.
- **Electroconvulsive shock therapy (ECT):** The administration of an electrical current of varied intensity to the brain to alleviate symptoms of severe chronic depression.
- **Psychoactive drugs:** Prescribed drugs that alter mood or behavior by effecting metabolic processes that affect the brain. They are administered to stabilize moods (e.g., lithium for manic depression), to alleviate depressed states (e.g., Prozac), or to induce or subdue certain emotional states.

ADVANTAGES OF THE MEDICAL MODEL

The medical model promotes a more human understanding of patients, aids in the understanding of some organic mental disorders, and further instills research in brain functioning.

DISADVANTAGES OF THE MEDICAL MODEL

Environmental variables are unduly minimized or neglected, and diagnostic and treatment methods are questionable, thus fostering an "institutionalization syndrome." This approach removes responsibility from the person to want to be cured and promotes dependence on hospitals and chemicals.

- **Pathological interpersonal relationships:** Stressful, anxiety-causing, maladaptive personal relationships (e.g., codependent, narcissistic, or control-obsessive) or no relationships at all.
- **Severe stress:** Extreme pressure on the coping mechanisms that takes a destructive toll on psychological processes (e.g., posttraumatic stress disorder resulting from combat, captivity, torture, natural disasters, or being kidnapped or terrorized).

OVERVIEW OF PSYCHOLOGICAL SCHOOLS OF THOUGHT

- **Psychoanalysis:** Early development models the personality and adaptation; the determinants of behavior are largely subconscious processes.
- **Neo-Freudians:** Focus is on pathological social and interpersonal relationships; concentrates on the power of the ego instead of the id; emphasizes social interactions in the formation of personality and deemphasizes instincts and biological factors; in psychotherapy, neo-Freudians emphasize the present, not the past, tend to advocate shorter periods of treatment, and focus on specific problems that could be readily treated.
- **Behaviorists:** Faculty learning and conditioning processes produce abnormality; the determinants of behavior can usually be understood only by investigating overt observable behavior.
- **Humanism:** Focus is on how blocked personal growth and value conflicts lead to abnormality.

headings **Rethinking Perception and Centering the Voices of Unique Individuals: Reframing Autism Inclusion in Praxis** Nerren, Jessica Block, 2022-06-30 Ensuring classrooms are inclusive to all students particularly those with disabilities such as autism spectrum disorder is crucial in today's educational landscape. It is vital that educators are prepared and knowledgeable on the current best practices and policies in order to provide these students with the most thorough education possible. *Rethinking Perception and Centering the Voices of Unique Individuals: Reframing Autism Inclusion in Praxis* introduces a new model of reframing autism spectrum disorder inclusion for professors of preliminary teacher candidates and provides meaningful understanding and support for professors who prepare preliminary teacher candidates. Covering key topics such as equity, mental disorders, inclusive education, and educational reform, this reference work is ideal for administrators, stakeholders, policymakers, teacher educators, counselors, researchers, academicians, scholars, practitioners, instructors, and students. *The All-seeing Eye*, 1926 *Current Pharmaceutical Design*, 1999-05

Fieldwork and Supervision for Behavior Analysts Ellie Kazemi, Peter Adzhyan, Brian Rice, 2024-09-04 The ultimate comprehensive and competency-based approach to effective supervision of behavior analysts. Now in its second edition, serves as a practical guide for both supervisors and supervisees in behavior analysis, offering step-by-step strategies, activities, and case scenarios to support professional growth. Grounded in over 35 years of combined experience and research, it provides tools for navigating supervision with a focus on ethics, cultural responsiveness, and competency-based development. The book aligns with the Board Certified Behavior Analyst Test Content Outline 6th ed and introduces author-developed competencies in its latter half. Each competency includes activities tailored to varying skill levels, promoting personalized growth. Overall, this book empowers supervisees to take ownership of their development while equipping supervisors with effective resources. What's New: Expanded guidance on strengthening the supervisor-supervisee relationship; Integrated compassionate care and trauma-informed practice; Updated supervision content to reflect new research and literature. Key Features: Step-by-step guides for running supervision meetings streamline the process for supervisors and empower supervisees to take control of their own development; Emphasis on the supervisee's experience enhances outcomes by addressing the interdependent nature of the supervisor-supervisee relationship; Practical activities, case scenarios, and meeting templates provide tangible resources for supervisors to tailor supervision to individual needs; Competencies are broken down into different skill levels, allowing for targeted development and increased individualization. Written by seasoned professionals with over three decades of supervisory experience in different contexts, offering unparalleled expertise and perspective. [Time Distortions in Mind](#), 2015-07-14 *Time Distortions in Mind* brings together current research on aspects of temporal processing in clinical populations in the ultimate hope of elucidating the interdependence between perturbations in timing and disturbances in the mind and brain. Such research may inform not only typical psychological functioning but may also elucidate the psychological consequences of any pathophysiological differences in temporal processing. This collection of current knowledge on temporal

processing in clinical populations is an excellent reference for the student and scientist interested in the topic but it also serves as the stepping stone to share ideas and push forward the advancement in understanding how distorted timing can lead to a disturbed brain and mind or vice versa Contributors to this volume Ryan D Ward Billur Avlar Peter D Balsam Deana B Davalos Jamie Oppen Yvonne Delevoye Turrell H I ne Wilquin Mariama Dione Anne Giersch Laurence Lalanne Mitsouko van Assche Patrick E Poncelet Mark A Elliott Deborah L Harrington Stephen M Rao Catherine R G Jones Marjan Jahanshahi Bon Mi Gu Anita J Jurkowski Jessica I Lake Chara Malapani Warren H Meck Rebecca M C Spencer Dawn Wimpory Brad Nicholas Elzbieta Szelag Aneta Szymaszek Anna Oron Melissa J Allman Christine M Falter Argiro Vatakis Alexandra Elissavet Bakou
