Molecular sieves, 2005 **Spillover and Mobility of Species on Solid Surfaces** A. Guerrero-Ruiz, I.

Rodriguez-Ramos, 2001-08-02 Spillover and Mobility of Species on Solid Surfaces collects the papers which were presented at the Fifth International Conference Spillover either as oral or poster contributions as well as the summaries of the invited lectures This congress and its publication in the Studies on Surface Science and Catalysis series follow the tradition of previous conferences on spillover initiated in Lyon 1983 and continued in Leipzig 1989 Kyoto 1993 and Dalian 1997 For the fifth conference held in S L el Escorial Madrid the organising committee has attempted to compile representative contributions which illustrate the advances in understanding the spillover phenomenon since 1997 Spillover is a process taking place during the interface of gas reactant molecules mainly hydrogen and oxygen on solid surfaces However different contributions to the more general area of the chemistry at surfaces related with the mobility and migration of species diffusion through membranes fuel cell catalysts etc have also been included In fact the title of the present volume summarizes this attempt to extend the conference topics towards dynamics at surfaces Among the 70 contributions received the 56 accepted papers were selected on the basis of the reports of at least two international reviewers according to standards comparable to those applied for other specialised journals These papers are from 21 different countries

Recent Advances in the Science and Technology of Zeolites and Related Materials C. Claeys, 2004 Recent Advances in Science and Technology of Zeolites and Related Materials is a collection of oral and poster communications presented during the 14th International Zeolite Conference IZC The conference was hosted by the Catalysis Society of South

Africa In the tradition of the IZC series this Conference provides a forum for the presentation of new knowledge in the science and technology of zeolites and related materials Papers presented cover a wide range of topics that include synthesis structure determination characterisation modelling and catalysis This highly visual book is a must for readers looking to stay up to date on zeolite science This three part volume provides valuable information on zeolites and related materials Includes papers that cover topics such as structure determination modelling and separation processes Contains new and exciting developments in the field *Thomas Register of American Manufacturers and Thomas Register Catalog File*, 2002 Vols for 1970 71 includes manufacturers catalogs **The Physics of Semiconductor Devices** R. K. Sharma, D.S. Rawal, 2019-01-31 This book disseminates the current knowledge of semiconductor physics and its applications across the scientific community It is based on a biennial workshop that provides the participating research groups with a stimulating platform for interaction and collaboration with colleagues from the same scientific community The book discusses the latest developments in the field of III nitrides materials devices compound semiconductors VLSI technology optoelectronics sensors photovoltaics crystal growth epitaxy and characterization graphene and other 2D materials and organic semiconductors *New and Future Developments in Catalysis* Steven L Suib, 2013-07-17 New and Future Developments in Catalysis is a package of seven books that compile the latest ideas concerning alternate and renewable energy sources and the role that catalysis plays in converting new renewable feedstock into biofuels and biochemicals Both homogeneous and heterogeneous catalysts and catalytic processes will be discussed in a unified and comprehensive approach There will be extensive cross referencing within all volumes The various sources of environmental pollution are the theme of this volume The volume lists all current environmentally friendly catalytic chemical processes used for environmental remediation and critically compares their economic viability Offers in depth coverage of all catalytic topics of current interest and outlines future challenges and research areas A clear and visual description of all parameters and conditions enabling the reader to draw conclusions for a particular case Outlines the catalytic processes applicable to energy generation and design of green processes

Proceedings of the XV Ibero-American Congress of Mechanical Engineering Antonio Vizán Idoipe, Juan Carlos García Prada, 2023-08-02 This open access book shows some of the highlights presented at the XV Ibero American Congress of Mechanical Engineering The papers explore the forefront of Mechanical Engineering containing research into fluid mechanics energy systems tribology materials science robotics mechatronics biomechanics instrumentation thermodynamics and mechanical sustainability **Proceedings of the Thirteenth International Conference on Chemical Vapor**

Deposition Theodore M. Besmann, 1996 **Adsorption and Catalysis on Oxide Surfaces** M. Che, G.C. Bond, 1985-07-01 The Symposium was held to honour the memory of the late Dr A J Tench who made numerous important contributions to our knowledge of the structure reactivity and adsorption properties of oxide surfaces This volume contains an up to date picture of adsorption and catalysis on oxide surfaces not in the form of a comprehensive review but in its living aspects of work in

progress It describes detailed studies on the determination of the coordination surface ions particularly oxide ions by photoluminescence and reflectance spectroscopy on the identification of adsorbed species by magnetic optical or surface techniques and on catalysis with emphasis on new concepts such as catalysis involving excited states or structure sensitive reactions Professionals working in the industrial and academic laboratories will find the book particularly useful as it provides a state of the art account of our understanding of the structure and adsorption characteristics of oxide surfaces Contained in the book are first class research papers by leading exponents in this field A very important issue is that the book highlights for the first time the importance of excited states and structure sensitivity in determining the behaviour of oxide surfaces
