The TVs of Tomorrow Benjamin Gross,2018-03-22 In 1968 a team of scientists and engineers from RCA announced the creation of a new form of electronic display that relied upon an obscure set of materials known as liquid crystals At a time when televisions utilized bulky cathode ray tubes to produce an image these researchers demonstrated how liquid crystals could electronically control the passage of light One day they predicted liquid crystal displays would find a home in clocks calculators and maybe even a television that could hang on the wall Half a century later RCA s dreams have become a reality and liquid crystals are the basis of a multibillion dollar global industry Yet the company responsible for producing the first LCDs was unable to capitalize upon its invention In The TVs of Tomorrow Benjamin Gross explains this contradiction by examining the history of flat panel display research at RCA from the perspective of the chemists physicists

electrical engineers and technicians at the company's central laboratory in Princeton New Jersey Drawing upon laboratory notebooks internal reports and interviews with key participants Gross reconstructs the development of the LCD and situates it alongside other efforts to create a thin lightweight replacement for the television picture tube He shows how RCA researchers mobilized their technical expertise to secure support for their projects He also highlights the challenges associated with the commercialization of liquid crystals at RCA and Optel the RCA spin off that ultimately manufactured the first LCD wristwatch

The TVs of Tomorrow is a detailed portrait of American innovation during the Cold War which confirms that success in the electronics industry hinges upon input from both the laboratory and the boardroom *Technology Review*, 1991 [Title List of Documents Made Publicly Available](#) U.S. Nuclear Regulatory Commission, 1983-04 *Soap, Science, and Flat-Screen TVs* David Dunmur, Tim Sluckin, 2014-05-29

The terms liquid crystal or liquid crystal display LCD are well known in the context of flat screen televisions but the properties and history of liquid crystals are little understood This book tells the story of liquid crystals from their controversial discovery at the end of the nineteenth century to their eventual acceptance as another state of matter to rank alongside gases liquids and solids As their story unfolds the scientists involved and their works are put into illuminating broader socio political contexts In recent years liquid crystals have had a major impact on the display industry culminating in the now widely available flat screen televisions this development is described in detail over three chapters and the basic science behind it is explained in simple terms accessible to a general reader New applications of liquid crystals in materials bio systems medicine and technology are also explained The authors approach to the subject defines a new genre of popular science books The historical background to the scientific discoveries is given in detail and the personal communications between the scientists involved are explored The book tells the story of liquid crystals but it also shows that scientific discovery and exploitation relies on human interactions and the social and political environments in which they work *Electrical News and Engineering*, 1929 **Electrical News. Generation, Transmission and Application of Electricity**, 1929 *Television for Women* Rachel Moseley, Helen Wheatley, Helen Wood, 2016-11-10

Television for Women brings together emerging and established scholars to reconsider the question of television for women In the context of the 2000s when the potential meanings of both terms have expanded and changed so significantly in what ways might the concept of programming addressed explicitly to a group identified by gender still matter The essays in this collection take the existing scholarship in this field in significant new directions They expand its reach in terms of territory looking beyond for example the paradigmatic Anglo American axis and also historical span Additionally whilst the influential methodological formation of production text and audience is still visible here the new research in *Television for Women* frequently reconfigures that relationship The topics included here are far reaching from television as material culture at the British exhibition in the first half of the twentieth century women's roles in television production past and present to popular 1960s television such as *The Liver Birds* and in the twenty first century highly successful programmes

including Orange is the New Black Call the Midwife One Born Every Minute and Wanted Down Under This book presents ground breaking research on historical and contemporary relationships between women and television around the world and is an ideal resource for students of television media and gender studies Replies from Executive Departments and Federal Agencies to Inquiry Regarding Use of Advisory Committees ,1956 *Replies from Executive Departments and Federal Agencies to Inquiry Regarding Use of Advisory Committees: Independent offices and establishments* ,1956 Information Display ,2006 **Harnessing Light** National Research Council,Division on Engineering and Physical Sciences,Commission on Physical Sciences, Mathematics, and Applications,Committee on Optical Science and Engineering,1998-09-25 Optical science and engineering affect almost every aspect of our lives Millions of miles of optical fiber carry voice and data signals around the world Lasers are used in surgery of the retina kidneys and heart New high efficiency light sources promise dramatic reductions in electricity consumption Night vision equipment and satellite surveillance are changing how wars are fought Industry uses optical methods in everything from the production of computer chips to the construction of tunnels Harnessing Light surveys this multitude of applications as well as the status of the optics industry and of research and education in optics and identifies actions that could enhance the field s contributions to society and facilitate its continued technical development
