Cellular and Molecular Biology of Intermediate Filaments R.D. Goldman, P.M. Steinert, 2013-06-29

Research activity on intermediate filaments IF has increased dramatically over the past decade For the most part this surge of interest is due to their identification as ubiquitous constituents of the cytoskeleton and karyoskeleton nuclear matrix of eukaryotic cells and the fact that we know very little regarding their functions In sharp contrast to the other major cytoskeletal systems microfilaments and microtubules IF exhibit a high degree of heterogeneity with regard to their protein subunit composition Indeed one can only marvel at the number of different IF polypeptides their associated proteins IFAP and consequently the number of genes involved in encoding the multiple constituents of the various IF networks found in different cell types The chapters in this book demonstrate how various experimental approaches involving cellular molecular biochemical and immunological methods have been utilized to generate information regarding the structure and function of IF To this end we have gathered together chapters from experts in the major fields of IF research In each chapter the authors

have combined reviews of the available scientific literature with their own ideas on current and future directions for IF research. The chapters have been divided into five major sections which are concerned with the subcellular organization of IF, the molecular structure of IF, the differential expression of IF genes, descriptions of associated proteins involved in the intracellular organization of IF, and finally an analysis of the changes seen in IF in pathological conditions. **Engineering News**, 1910
