QUESTIONS	ANSWERS	EXTRA INFO
The Industrial Revolution Overview		
1. Why was the Industrial Revolution such a big deal?	It literally changed the entire world from the way people think, to where they work, and social structures. It inspired waves of nationalism that had serious effects on colonies and their chances for independence. After the agricultural revolution around 10,000 BCE, this was the next biggest change the world had seen.	Learning Objective 5.5.F Railroads, steamships, and the telegraph made exploration, development, and communication possible in interior regions globally, which led to increased trade and migration.
2. What was the Industrial Revolution?	It was the introduction of machine manufacturing and industry and transformed the world from one based on agrarian/handicraft economies to one based on industrial production in factories.	Learning Objective 5.5.F The "first industrial revolution" (1740-1860) focused on coal, iron and cotton. The "second industrial revolution" (1860-1900) led to new methods in the production of steel, chemicals, electricity and precision machinery.
3. What led to the creation of factory systems?	New innovations like the Spinning Jenny and the Water Frame which were first powered by moving water and then steam, required space and money. Entrepreneurs put several into the same space and the factory was born. It also helped that parts could be replaced instead of whole machines, thanks to Eli Whitney. This also meant the artisans were no longer needed.	Learning Objective 5.3.D The development of the factory system concentrated production in a single location and led to an increasing degree of specialization of labor, contributing to industrialization. Learning Objective 5.5.F This helps to explain how technology shaped economic production over time. The development of machines, including steam engines and the internal combustion engine (found in cars) made it possible to take advantage of both existing and vast newly discovered resources of energy found in fossil fuels like coal and oil. This was considered a fossil fuel revolution and it greatly increased the energy available to human societies.
4. Why were unskilled workers more likely to find work during the Industrial Revolution?	Workers on assembly lines were responsible for a single part of whatever was produced and they did the same task over and over again. Workers no longer made a full product from start to finish.	
5. What did industrialization mean for the consumer?	Because products could be made quickly prices went down, which meant average people could buy more stuff and factory owners became very wealthy.	5. Learning Objective 5.7.H & 5.10.K The development of industrial capitalism led to increased standards of living for some, and to continued improvement in
