Parent Teaches MATH! Kerridwen Mangala McNamara,2023-11-10 We all worry about our kids learning math Even if the kids are in school there s always a concern Sometimes it s about the kid s concern sometimes it s about their teacher s concern parent teacher or otherwise But a lot of the time it s about US It s about our own math phobias those fears dislikes or aversions that we picked up from our own math experiences and that we inadvertently pass on to our kids We don t want them to be afraid of math we know that limits their opportunities and makes their lives harder and costs them more money but we just can t help it This book is here to help you deal with your own math phobias and come to if not outright enjoy math to at least appreciate it and be able to convey it to your kids without passing on the fear Kerridwen Mangala McNamara is NOT a math lover but she is a math appreciator and has worked through most of these issues herself Let her help you along your homeschooling journey and show you how to fight the Fear of Math monster so that it no longer intimidates you or your kids *Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1986 ,2004*

Awesome Math Titu Andreescu,Kathy Cordeiro,Alina Andreescu,2019-11-13 Help your students to think critically and creatively through team based problem solving instead of focusing on testing and outcomes Professionals throughout the education system are recognizing that standardized testing is holding students back Schools tend to view children as outcomes rather than as individuals who require guidance on thinking critically and creatively Awesome Math focuses on team based problem solving to teach discrete mathematics a subject essential for success in the STEM careers of the future Built on the increasingly popular growth mindset this timely book emphasizes a problem solving approach for developing the skills necessary to think critically creatively and collaboratively In its current form math education is a series of exercises straightforward problems with easily obtained answers Problem solving however involves multiple creative approaches to solving meaningful and interesting problems The authors co founders of the multi layered educational organization AwesomeMath have developed an innovative approach to teaching mathematics that will enable educators to Move their students beyond the calculus trap to study the areas of mathematics most of them will need in the modern world Show students how problem solving will help them achieve their educational and career goals and form lifelong communities of support and collaboration Encourage and reinforce curiosity critical thinking and creativity in their students Get students into the growth mindset coach math teams and make math fun again Create lesson plans built on problem based learning and identify and develop educational resources in their schools Awesome Math Teaching Mathematics with Problem Based Learning is a must have resource for general education teachers and math specialists in grades 6 to 12 and resource specialists special education teachers elementary educators and other primary education professionals *Zoo-A-Logical Math* Thomas Kearney,2012-04 The work for this book began with a course I created and taught called Animal Behavior I always knew that there was a strong magnetic bond between people and animals but it wasn t until I began working on my curriculum that I truly found out how strong this bond really was Millions of people young and old will visit zoos and

aquariums each year People stand in front of the animals hypnotized by the every movement of the animal People seemed to be looking not just at the animal but almost as if they were looking inside these animals wondering and questioning about the lives of some of our most distant animal relatives In my classroom I found the exact same kinds of responses The discussions and questions of my students motivated me to share with you the lives and abilities of some of the most amazing living creatures in the world People realize that humans are also animals but the belief that we have superior intelligence and problem solving abilities makes us think we are far superior to all of the rest of our Animal World As I began to learn more and lead my student discussions I soon realized that maybe our intelligence was the only thing that we really did have in our superiority over the rest of our animal relatives I began to look into the idea of comparing humans to animals in a wide variety of behaviors and activities and soon a brand new window into the REAL world of animals began to open up I soon realized that even the most insignificant animals in our world were really superstars when compared to humans By using math we are able to truly get a comparison of animals and how they relate to our own human abilities As I began to create the problems and do the math it became very evident that I began to get the responses that I had hoped for I soon began to call these responses the Wow factor A number of times the teachers that have worked on the problems would actually go back and do the problems a second time because there has to be a mistake or no way that this can be true There were no mistakes and the math did not lie The math allowed us to look at the animals in a totally different way I hope that you too will be amazed and wowed by some of these amazing animals that we share our world with

Math Circles for Elementary School Students Natasha Rozhkovskaya, 2014-11-05 The main part of this book describes the first semester of the existence of a successful and now highly popular program for elementary school students at the Berkeley Math Circle The topics discussed in the book introduce the participants to the basics of many important areas of modern mathematics including logic symmetry probability theory knot theory cryptography fractals and number theory Each chapter in the first part of this book consists of two parts It starts with generously illustrated sets of problems and hands on activities This part is addressed to young readers who can try to solve problems on their own or to discuss them with adults The second part of each chapter is addressed to teachers and parents It includes comments on the topics of the lesson relates those topics to discussions in other chapters and describes the actual reaction of math circle participants to the proposed activities The supplementary problems that were discussed at workshops of Math Circle at Kansas State University are given in the second part of the book The book is richly illustrated which makes it attractive to its young audience In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Sciences Research Institute MSRI

Success with STEM Sue Howarth, Linda Scott, 2014-11-13 Success with STEM is an essential resource packed with advice

and ideas to support and enthuse all those involved in the planning and delivery of STEM in the secondary school It offers guidance on current issues and priority areas to help you make informed judgements about your own practice and argue for further support for your subject in school It explains current initiatives to enhance STEM teaching and offers a wide range of practical activities to support exciting teaching and learning in and beyond the classroom Illustrated with examples of successful projects in real schools this friendly inspiring book explores Innovative teaching ideas to make lessons buzz Activities for successful practical work Sourcing additional funding Finding and making the most of the best resources STEM outside the classroom Setting up and enhancing your own STEM club Getting involved in STEM competitions fairs and festivals Promoting STEM careers and tackling stereotypes Health safety and legal issues Examples of international projects An wide ranging list of project and activity titles Enriched by the authors extensive experience and work with schools Success with STEM is a rich compendium for all those who want to develop outstanding lessons and infuse a life long interest in STEM learning in their students The advice and guidance will be invaluable for all teachers subject leaders trainee teachers and NQTs

Challenging Mathematics In and Beyond the Classroom Edward J. Barbeau, Peter J. Taylor, 2009-04-21

In the mid 1980s the International Commission on Mathematical Instruction ICMI inaugurated a series of studies in mathematics education by commissioning one on the influence of technology and informatics on mathematics and its teaching These studies are designed to thoroughly explore topics of temporary interest by gathering together a group of experts who prepare a Study Volume that provides a considered assessment of the current state and a guide to further developments Studies have embraced a range of issues some central such as the teaching of algebra some closely related such as the impact of history and psychology and some looking at mathematics education from a particular perspective such as cultural differences between East and West These studies have been commissioned at the rate of about one per year Once the ICMI Executive decides on the topic one or two chairs are selected and then in consultation with them an International Program Committee IPC of about 12 experts is formed The IPC then meets and prepares a Discussion Document that sets forth the issues and invites interested parties to submit papers These papers are the basis for invitations to a Study Conference at which the various dimensions of the topic are explored and a book the Study Volume is sketched out The book is then put together in collaboration mainly using electronic communication The entire process typically takes about six years
