Basic Management Plan for Care Under Fire

- 1 Return fire and take cover
- 2 Direct or expect casualty to remain engaged as a combatant if appropriate
- 3 Direct casualty to move to cover and apply self aid if able
- 4 Try to keep the casualty from sustaining additional wounds
- 5 Casualties should be extricated from burning vehicles or buildings and moved

to places of relative safety Do what is necessary to stop the burning process 6 Airway management is generally best deferred until the Tactical Field Care phase 7 Stop life threatening external hemorrhage if tactically feasible Direct casualty to control hemorrhage by self aid if able Use a CoTCCC recommended tourniquet for hemorrhage that is anatomically amenable to tourniquet application Apply the tourniquet proximal to the bleeding site over the uniform tighten and move the casualty to cover
