## Highly Pathogenic Avian Influenza & Newcastle Disease Viruses

Newcastle Disease and Avian Influenza, are both extremely contagious and devastating diseases, which cause high morbidity and mortality rates in poultry (predominantly chickens and turkeys).

The consequences are immediate and financially severe. However, with thought and planning, a comprehensive Advanced Biosecurity Programme which includes both "terminal" and "continuous" farm biosecurity can be implemented in order to minimise the impact of potentially catastrophic outbreaks.

### Terminal Biosecurity Program

The standard terminal biosecurity program objective is to prevent the "carry-over" of pathogenic organisms, thus ensuring that each new production cycle gets a completely clean fresh start.

**STEP 1:** Dry cleaning of the building; remove the dry organic matters (bedding, litter, left-over food) and movable equipment.

**STEP 2:** Clean and disinfect the drinking water systems.

**STEP 3-5:** Clean the building and equipment with a high quality detergent to ensure all surfaces and equipment are visibly clean before moving on to the disinfection stage.

**STEP 6-10:** Disinfect with a product that has been scientifically proven effective.
