and using exploratory data analysis to illustrate the nature of financial data The software used to obtain the data for the
examples in the first chapter and for all computations and to produce the graphs is R However discussion of R is deferred to
an appendix to the first chapter where the basics of R especially those most relevant in financial applications are presented
and illustrated The appendix also describes how to use R to obtain current financial data from the internet Chapter 2
describes the methods of exploratory data analysis especially graphical methods and illustrates them on real financial data
Chapter 3 covers probability distributions useful in financial analysis especially heavy tailed distributions and describes
methods of computer simulation of financial data Chapter 4 covers basic methods of statistical inference especially the use of
linear models in analysis and Chapter 5 describes methods of time series with special emphasis on models and methods
applicable to analysis of financial data Features Covers statistical methods for analyzing models appropriate for financial
data especially models with outliers or heavy tailed distributions Describes both the basics of R and advanced techniques
useful in financial data analysis Driven by real current financial data not just stale data deposited on some static website
Includes a large number of exercises many requiring the use of open source software to acquire real financial data from the
internet and to analyze it
