

Module 1

Q 1 a. What is data structure? What are various types of data structure? Explain. (5 marks)

Ans:

A structure represents name, type, size and format. A data structure is a represents to organize and store data in terms of name, type, size and & format in computers memory. Data may contain a single element or sometimes it may be a set of elements. Whether it is a single element or multiple elements but it must be organized in a particular way in the computer memory system.

General data structure types include the array, lists, vectors, the file, the record, the table, the tree, graph and so on. Any data structure is designed to organize data to suit a specific purpose so that it can be accessed and operated with appropriate ways.

Types of data structure:

Data Structure operations:

- **Addition/insertion:** To add data at beginning or end or to insert data between two data
- **Sorting:** To sort data either in ascending or descending order to make the search operation faster
- **Search:** To search data within given collection by different ways
- **Modification:** To modify existing data with new data
- **Deletion:** To delete existing data

Q1b. What is a structure? How it is different from array? Explain different types of structure declarations with examples & give differences between Union & Structure. (10 Marks)

Ans:

Structure is a data structure whose individual elements can differ in type. It may contain integer elements, character elements, pointers, arrays and even other structures can also be included as elements within a structure.

Different from Array: Array is collection of similar data type but structure is composed of different data types. It represents a record with different fields. Structure of a student may have roll number of integer, name as string and marks as float.

struct is keyword to define a structure.

```
struct tag { type member1;  
            type member2;  
            type member3; ..... type member n;};
```
