

The body's sensory receptors react to stimuli or changes occurring both within the body and in the external environment. When triggered, these receptors send nerve impulses along afferent pathways to the brain for interpretation, thus, allowing the body to assess and adjust to changing conditions so that homeostasis may be maintained.

The minute receptors of general sensation that react to touch—pressure, pain, temperature changes, and muscle tension—are widely distributed in the body. These are considered in Chapter 7. In contrast, receptors of the special senses—sight, hearing, equilibrium, smell, and taste—tend to be localized and in many cases are quite complex. The structure and function of the special sense organs are the subjects of the student activities in this chapter.

Merrill, 2021-05-15 How did Chicago, a city known for commerce, come to have such a splendid public waterfront, its most treasured asset? *Lakefront* reveals a story of social, political, and legal conflict in which private and public rights have clashed repeatedly over time, only to produce, as a kind of miracle, a generally happy ending. Joseph D. Kearney and Thomas W. Merrill study the lakefront's evolution from the middle of the nineteenth century to the twenty-first. Their findings have significance for understanding not only Chicago's history but also the law's part in determining the future of significant urban resources such as waterfronts. The Chicago lakefront is where the American public trust doctrine, holding certain public resources off-limits to private development, was born. This book describes the circumstances that gave rise to the doctrine and its fluctuating importance over time and reveals how it was resurrected in the later twentieth century to become the primary principle for mediating clashes between public and private lakefront rights. *Lakefront* compares the effectiveness of the public trust idea to other property doctrines and assesses the role of the law as compared with more institutional developments such as the emergence of sanitary commissions and park districts in securing the protection of the lakefront.

for public uses By charting its history Kearney and Merrill demonstrate that the lakefront s current status is in part a product of individuals and events unique to Chicago But technological changes and a transformation in social values in favor of recreational and preservationist uses also have been critical Throughout the law while also in a state of continual change has played at least a supporting role

Universal Semantic Communication Brendan Juba, 2011-10-27 Is meaningful communication possible between two intelligent parties who share no common language or background In this work a theoretical framework is proposed in which it is possible to address when and to what extent such semantic communication is possible such problems can be rigorously addressed by explicitly focusing on the goals of the communication Under this framework it is possible to show that for many goals communication without any common language or background is possible using universal protocols This work should be accessible to anyone with an undergraduate level knowledge of the theory of computation The theoretical framework presented here is of interest to anyone wishing to design systems with flexible interfaces either among computers or between computers and their users
