A. Neff,Uli Niemann,2024-08-09 New developments in machine learning ML and artificial intelligence AI hold great promise to revolutionize mental health care In this context ML and AI have been deployed for several different goals including 1 the early detection of mental disorders 2 the optimization of personalized treatments based on the individual characteristics of patients 3 the better characterization of disorders detrimental to mental well being and quality of life as well as a better description of projected trajectories over time and 4 the development of new treatments for mental health care Despite their great potential to transform mental health care and occasional breakthroughs ML and AI have not yet fully achieved these goals This research topic aims to bridge the gap between the potential uses of ML and AI and their practical application in standard mental health care More specifically we welcome original research submissions applying ML and AI to promote public health by reducing the burden of chronic disorders with detrimental effects on well being e g psychopathological distress and improving quality of life We also welcome submissions applying ML and AI in heterogeneous datasets e g subjective scales and questionnaires biomarkers neuro psychological assessments etc from Big Data sources e g large datasets of clinical populations electronic health records from nationally representative cohorts and or biobanks studies using experiencing sampling methods etc to gain mechanistic insight on how different chronic conditions associated with psychopathological distress can affect patient well being and quality of life Finally we also welcome opinion papers and reviews on how to develop AI applications in mental health care responsibly while integrating biopsychosocial aspects of patients to promote better mental health care *Flying Magazine* ,2002-08 Clinical Assessment of Child and Adolescent Personality and Behavior Paul J. Frick,Christopher T. Barry,Randy W. Kamphaus,2009-12-12 Psychologists offer an increasing variety of services to the public Among these services psychological assessment of personality and behavior continues to be a central activity One main reason is that other mental health professionals often do not possess a high level of competence in this area And when dealing with children and adolescents psychological assessment seems to take on an even greater role Therefore it follows that comprehensive graduate level instruction in assessment should be a high priority for educators of psychologists who will work with these youth This textbook is organized into three sections consistent with the authors approach to teaching Part I provides students with the psychological knowledge base necessary for modern assessment practice including historical perspectives measurement science child psychopathology ethical legal and cultural issues and the basics of beginning the assessment process Part II gives students a broad review of the specific assessment methods used by psychologists accompanied by specific advice regarding the usage and strengths and weaknesses of each method In Part III we help students perform some of the most sophisticated of assessment practices integrating and communicating assessment results

and infusing assessment practice with knowledge of child development and psychopathology to assess some of the most common types of behavioral and emotional disorders in youth A text focusing on assessment practices must be updated every four to six years to keep pace with advances in test development For example several of the major tests reviewed in the text such as the Behavioral Assessment System for Children and the Child Behavior Checklist have undergone major revisions since the publication of the last edition making the current content outdated Further another major test the Conners Rating Scales is undergoing substantial revisions that should be completed before publication of the next edition Finally the evidence for the validity of the tests and the recommendations for their appropriate use evolve as research accumulates and requires frequent updating to remain current For example there was a special issue of the Journal of Clinical Child and Adolescent Psychology published focusing on evidenced based assessment of the major forms of childhood psychopathology that will need to be integrated into the chapters in Part 3 This latter point reflects an important trend in the field that should influence the marketing of the book That is there are several initiatives being started in all of the major areas of applied psychology e g school clinical and counseling to promote evidenced based assessment practices These initiatives have all emphasized the need to enhance the training of graduate students in this approach to assessment This has been the orientation of this textbook from its first edition that is Clinical Assessment of Child and Adolescent Personality and Behavior has focused on using research to guide all recommendations for practice The ability of the textbook to meet this training need should be an important focus of marketing the book to training programs across all areas of applied psychology
