

## Teacher Guide: Archimedes' Principle

### Learning Objectives

Students will:

- 1. Verify that the mass of a floating body is equal to the mass of displaced liquid.
- 2. Qualitatively predict how the forces of a given submerged object change with the size of the object.
- 3. Understand how gravity and the buoyant force influence motion and position of a body.
- 4. Explain Archimedes' principle.
- 5. Apply Archimedes' principle to fluid situations.

### Summary

Archimedes' principle: buoyant force, density, pressure, mass, volume, weight

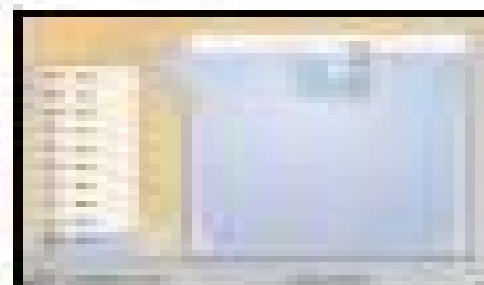

### Lesson Overview

Students are introduced why a hot air balloon floats and a boat sinks. The balloon floats because the air is lighter, making an upward buoyant force. The boat sinks because it is denser than the water it is submerged in.

The Archimedes' Principle Demo shows a metal "boat" floating in water. Students are introduced to the concept of the buoyant force, which is the upward force exerted by a fluid on a submerged object. The buoyant force is equal to the weight of the fluid displaced by the object.

The Archimedes' Principle Demo shows a metal "boat" floating in water.

- 1. Activity 1: Students verify that the mass of a boat is equal to the mass of displaced liquid.
- 2. Activity 2: Students determine whether a submerged boat will sink or float.
- 3. Activity 3: Students determine how the forces of gravity and buoyancy affect a boat.
- 4. Extension: Students explore how a boat's weight affects its position.

### Suggested Lesson Sequence

1. Pre-Demo activity: Student activity.  10 minutes. Students explore the concept of buoyancy by using a small object (e.g., a metal ball) to displace water in a container. They observe that the water level rises and that the object is pushed up by the water.
2. Lesson: The Archimedes' Principle Demo shows a metal "boat" floating in water. Students are introduced to the concept of the buoyant force, which is the upward force exerted by a fluid on a submerged object. The buoyant force is equal to the weight of the fluid displaced by the object.
3. Activity 1: Students verify that the mass of a boat is equal to the mass of displaced liquid.
4. Activity 2: Students determine whether a submerged boat will sink or float.
5. Activity 3: Students determine how the forces of gravity and buoyancy affect a boat.
6. Extension: Students explore how a boat's weight affects its position.
