computer science and business management **Artificial Intelligence in the Pacific Rim** Hozumi Tanaka,1991 In the last decade AI firmly settled into our industrial society with the expert systems as the representative product However almost every one of the systems could cover only a single task domain In the highly mechanized world of the 21st century systems will become smart and user friendly enough to cover a wide range of task domains Systems with much user friendliness must be multilingual because users in different domains usually have different languages Language is formed in its own culture Therefore promotion for cross cultural scientific interchange will be indispensable for the progress of AI Artificial Intelligence in Asset Management Söhnke M. Bartram,Jürgen Branke,Mehrshad Motahari,2020-08-28 Artificial intelligence AI has grown in presence in asset management and has revolutionized the sector in many ways It has improved portfolio management trading and risk management practices by increasing efficiency accuracy and compliance In particular AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints Trading algorithms use AI to devise novel trading signals and execute trades with lower transaction costs AI also improves risk modeling and forecasting by generating insights from new data sources Finally robo advisors owe a large part of their success to AI techniques Yet the use of AI can also create new risks and challenges such as those resulting from model opacity complexity and reliance on data integrity *Recent Advancements in Artificial Intelligence* Richi Nayak,Namita Mittal,Ajay Khunteta,Manoj Kumar,2025-10-09 This book contains selected papers presented at Third International Conference on Recent Advancements in Artificial Intelligence ICRAAI 2025 organized by the Department of Computer Science Engineering Faculty of Computer Science Engineering Poornima University Jaipur Rajasthan India during 21 22 February 2025 The topics covered in the book are the cutting edge research involved in Artificial Intelligence Machine Learning Deep Learning NLP and Data Science *Machine Learning and Other Soft Computing Techniques: Biomedical and Related Applications* Nguyen Hoang Phuong,Nguyen Thi Huyen Chau,Vladik Kreinovich,2024-08-19 This book contains applications to various health related problems from designing and maintaining a proper diet to enhancing hygiene to analysis of mammograms and left right brain activity to treating diseases such as diabetes and drug addictions Health issues are very important So naturally whatever new data processing technique appears researchers try to apply it to health issues as well From this viewpoint Artificial Intelligence AI and Computational Intelligence CI techniques are no exception they have been successfully applied to medicine and more promising applications are on the way Applications of AI and CI techniques to health issues are the main focus of this book Health issues are also very delicate because human bodies are complex organisms No matter how interesting and promising are new ideas and new techniques there is always a possibility of unexpected side effects Because of this we cannot apply untested methods to patients and we first need to test these methods on other less critical applications Several book chapters describe such applications whose success paves the way for these methods to be used in biomedical situations These applications range from human face detection to predicting student

success to predicting election results to explaining the observed intensity of space light We hope that this book helps practitioners and researchers to learn more about computational intelligence techniques and their biomedical applications and to further develop this important research direction
