## **Volvo S60 Problems Common:**

*No Accident* Neil Arason, 2014-04-29 It is possible to eliminate death and serious injury from Canada's roads. In other jurisdictions the European Union, centres in the United States and at least one automotive company aim to achieve comparable results as early as 2020. In Canada though citizens must turn their thinking on its head and make road safety a national priority. Since the motor vehicle first went into mass production the driver has taken most of the blame for its failures. In a world where each person's safety is dependent on a system in which millions of drivers must drive perfectly over billions of hours behind the wheel failure on a massive scale has been the result. When we neglect the central role of the motor vehicle as a dangerous consumer product the result is one of the largest human-made means for physically assaulting human beings. It is time for Canadians to embrace internationally recognized ways of thinking and enter an era in which the motor vehicle by-product of human carnage is relegated to history. *No Accident* examines problems related to road safety and makes recommendations for the way forward. Topics include types of drivers, human-related driving errors related to fatigue, speed, alcohol and distraction and roads, pedestrians, cyclists and public transit, road engineering, motor vehicle regulation, auto safety design and collision avoidance technologies such as radar and camera-based sensors on vehicles that prevent crashes. This multi-disciplinary study demystifies the world of road safety and provides a road map for the next twenty years.

Customer-Oriented Quality Management in the Automotive Industry Marit Breithfeld, 2005-02-28 Inhaltsangabe Abstract In times of severe competition it is of crucial importance to create a competitive advantage to differentiate from the competitors and to sustain the business of the company. This thesis intends to show that a customer-focused quality management is one way to create a sustainable competitive advantage. Quality controls along the whole value chain before, during and after production lead to failure-free products which save costs on the one hand and have thus a positive influence on the company's revenue. On the other hand failure-free products that meet the customers' expectations lead to satisfied customers who build up a brand loyalty and conduct retention sales which have a positive influence on the company's sales market share as well as the overall image. Furthermore this thesis points out that it is important to listen to the voice of the customers and get an insight in the customer's needs and wants. To fulfil or even exceed their expectations leads to customer satisfaction which is a key to success in today's business world. In addition the customer demands in regard of quality are growing continuously and new technologies are appearing on the markets on a regular basis. Therefore the producers are forced to keep to the latest technology developments and to get hold on the changing customer needs. But even without this external pressure quality improvement is justified from a cost point of view. The applicability of a customer-oriented quality management is shown in the practical part of this thesis when the quality of the Saab models is analyzed from the customer's perspective. Due to the arguments outlined in this thesis it can be summarized that a quality management with a focus on the needs of the customers should become a core strategy of any company producing and

selling products in order to create customer satisfaction and sustain the business This thesis deals with the field of quality management in the context of customer satisfaction To show the practical applicability of quality management this thesis is looking at how quality management is conducted in the automotive industry as we compare the Initial Quality Study IQS from the market research institute J D Power with a survey that was internally conducted at the Saab Automobile AB Today s business environment creates a growing need for quality management Tougher competition leads to the demand for cost savings and higher
