Inspecting the camshaft

Check the camshaft for wear on the bearing races and the cam flanks. It can happen that the races are slightly worn away. Slight wear here can be removed by honing the races. If the damage is more advanced or if there is considerable wear, replace the camshaft.

Measuring

What on the camshaft bearing races is measured with a microscope. The max. wear out-of-roundness is 0.01 mm (0.001 in). Check the straightness of the camshaft with a dial indicator. Maximum permissible total flexure relative to the end bearings is 0.04 mm (0.0016 in).

After checking the cam height, secure the camshaft between the studs.

Concerning the measurements for the camshaft and camshaft bearings, see under "Specifications".

Changing the camshaft bearings

Press the bearings out that side and then off them. Because of an operation like this, the camshaft bearings can only be changed in connection with a complete overhaul of the engine.

Check carefully when entering in the bearings that the bearings are placed in such a way that the oil ports are located that corresponding oil ports in the block.

Installing the camshaft

1. Carefully push in the camshaft so as not to damage the bearings. Fit the flange which locates the position of the shaft axially. Tighten up the bolts and lock them.
