The Architecture Of Happiness:

The Architecture of Happiness Alain De Botton, 2006 What makes a house beautiful Is it serious to spend your time thinking about home decoration Why do people disagree about taste Can buildings make us happy In *The Architecture of Happiness* Alain de Botton tackles a relationship central to our lives Our buildings and the objects we fill them with affect us more profoundly than we might think To take architecture seriously is to accept that we are for better and for worse different people in different places De Botton suggests that it is architecture's task to render vivid to us who we might ideally be Turning the spotlight from the humble terraced house to some of the world's most renowned buildings de Botton considers how our private homes and public edifices from those of Christopher Wren to those of Le Corbusier and Norman Foster influence how we feel as well as how we could learn to build in ways that would increase our chances of happiness *The Architecture of Happiness* amounts to a beguiling tour through the philosophy and psychology of architecture

The Architecture of Happiness Alain De Botton, 2010-12-03 Bestselling author Alain de Botton considers how our private homes and public edifices influence how we feel and how we could build dwellings in which we would stand a better chance of happiness In this witty erudite look at how we shape and are shaped by our surroundings Alain de Botton applies Stendhal's motto that Beauty is the promise of happiness to the spaces we inhabit daily Why should we pay attention to what architecture has to say to us de Botton asks provocatively With his trademark lucidity and humour de Botton traces how human needs and desires have been served by styles of architecture from stately Classical to minimalist Modern arguing that the stylistic choices of a society can represent both its cherished ideals and the qualities it desperately lacks On an individual level de Botton has deep sympathy for our need to see our selves reflected in our surroundings he demonstrates with great wisdom how buildings just like friends can serve as guardians of our identity Worrying about the shape of our sofa or the colour of our walls might seem self indulgent but de Botton considers the hopes and fears we have for our homes at a new level of depth and insight When shopping for furniture or remodelling the kitchen we don't just consider functionality but also the major questions of aesthetics and the philosophy of art What is beauty Can beautiful surroundings make us good Can beauty bring happiness The buildings we find beautiful de Botton concludes are those that represent our ideas of a meaningful life *The Architecture of Happiness* marks a return to what Alain does best taking on a subject whose allure is at once tantalizing and a little forbidding and offering to readers a completely beguiling and original exploration of the subject As he did with Proust philosophy and travel now he does with architecture

As a state of mind it's elusive. As a concept despite the plethora of pop psychology books on the subject it's poorly understood. In this volume in the MIT Press Essential Knowledge series, psychologist Tim Lomas offers a concise and engaging overview of our current understanding of happiness. Lomas explains that although the field of positive psychology, which focuses on happiness, emerged only in the last twenty-five years, interest in the meaning of happiness goes back several millennia. Drawing on a variety of disciplines from philosophy and sociology to economics and anthropology, Lomas offers an expansive vision of what happiness means, exploring a significant range of experiential territory. After considering such related concepts as wellbeing and flourishing, Lomas traces ideas of happiness from the ancient Buddhist notions of *sukha* and *nirvana* through Aristotle's distinction between hedonic and eudaemonic happiness to today's therapeutic and scientific approaches. He discusses current academic perspectives, looking at the breadth of happiness research across disciplines, examines the mechanics of happiness, the physiological, psychological, phenomenological, and sociocultural processes that make up happiness, explores the factors that influence happiness both individually and socially, and discusses the cultivation of happiness.

Stability of Happiness Kennon M. Sheldon, Richard E. Lucas, 2014-07-08. The right to pursue happiness is one of the dominant themes of western culture, and understanding the causes of happiness is one of the primary goals of the positive psychology movement. However, before the causality question can even be considered, a more basic question must be addressed: CAN happiness change? Reasons for skepticism include the notion of a genetic set point for happiness, i.e., a stable personal baseline of happiness to which individuals will always return, no matter how much their lives change for the better. The life-span stability of happiness-related traits such as neuroticism and extraversion and the powerful processes of hedonic adaptation, which erode the positive effects of any fortuitous life change. This book investigates prominent theories on happiness with the research evidence to discuss when and how happiness changes and for how long. Identifies all major theories of happiness. Reviews empirical results on happiness, longevity, stability. Discusses mitigating factors in what influences happiness, longevity.
