New Trends in Earth-Science Outreach and Engagement Jeanette L. Drake, Yekaterina Y. Kontar, Gwynne S. Rife, 2013-12-11 Perhaps just as perplexing as the biggest issues at the core of Earth science is the nature of communicating about nature itself. New Trends in Earth Science Outreach and Engagement: The Nature of Communication examines the processes of communication necessary in bridging the chasm between climate change and natural hazard knowledge and public opinion and policy. At this junction of science and society, 17 chapters take a proactive and prescriptive approach to communicating with the public, the media, and policy makers about the importance of Earth science in everyday life. Book chapters come from some 40 authors who are geophysical scientists, social scientists, educators, scholars, and professionals in the field. Bringing diverse perspectives, these authors hail from universities and research institutes, government agencies, non-profit associations, and corporations. They represent multiple disciplines including geosciences, education, climate science, education, environmental communication, and public policy. They come from across the United States and around the world. Arranged into five sections, the book looks at geosciences communication in terms of: 1. Education, 2. Risk management, 3. Public discourse, 4. Engaging the public, 5. New media. From case studies and best practices to field work and innovations, experts deliver pragmatic solutions and delve into significant theories including diffusion, argumentation, and constructivism, to name a few. Intended for environmental professionals, researchers, and educators in the geophysical and social sciences, the book emphasizes communication principles and practices within an up-to-the-minute context of new environmental issues, new technologies, and a new focus on resiliency.

Environmental Science for Grades 6-12 Jorge Valenzuela, James Fester, 2021-10-08 Apply high quality project-based learning strategies to create lessons and units that help students solve a variety of urgent environmental problems. Environmental science (ES) education is essential to preparing today's students for the future. We must create opportunities for hands-on investigations that explore complex environmental problems in order to find solutions and meet the challenges of our changing world. Educators looking to bring ES-focused experiences to their students can turn to technology and social-emotional learning (SEL) strategies to connect students with real-world situations and citizen science opportunities while fostering empathy and a love for the natural world. Project-based learning (PBL) with its emphasis on inquiry and authentic challenges can be an effective approach to teaching ES. Those new to PBL may not feel they have

adequate training Likewise teachers who haven't taught ES may question how to incorporate it into their curriculum This book addresses both situations providing practical guidance for teachers along with examples of technology rich learner centered student projects addressing timely topics such as sustainability human impact and climate change This book Helps teachers design learning experiences that model authentic problems and processes practiced by scientists and engineers to prepare students for future careers in science Addresses diversity equity and inclusion in ES and shares resources and strategies for addressing racial equity in ES Introduces facilitation techniques that redefine the teacher's traditional role as one that supports increased student agency the development of critical thinking skills and an expanded awareness of their place in the global community Includes a chapter that focuses on applying the principles and strategies shared in the book in an online learning environment Addresses Next Generation Science Standards NGSS topics in environmental science and is aligned to the ISTE Standards for Educators PBL is one of the best ways for students to explore complex processes and concepts and this book will help teachers leverage this approach to empower students to take action toward a better future and world Audience 6-12 science educators instructional coaches preservice teachers

The New Science of Geology Martin J.S. Rudwick, 2023-04-14 The science of geology was constructed in the decades around 1800 from earlier practices that had been significantly different in their cognitive goals In the studies collected here

Martin Rudwick traces how it came to be recognised as a new kind of natural science because it was constituted around the idea that the natural world had its own history The earth had to be understood not only in relation to unchanging natural laws that could be observed in action in the present but also in terms of a pre human past that could be reliably known even if not directly observable and its traces only fragmentarily preserved In contrast to this radically novel sense of nature s own contingent history the earth s unimaginably vast timescale was already taken for granted by many naturalists though not yet by the wider public and the concurrent development of biblical scholarship precluded any significant sense of conflict with religious tradition A companion volume Lyell and Darwin Geologists Studies in the Earth Sciences in the Age of Reform was published in 2005
