Stephen Hawking John Gribbin, 2016-01-15 Stephen Hawking is no ordinary scientist Perhaps more than any other scientist he has broadened our basic understanding of the universe His theoretical work on black holes and the origins and nature of the cosmos have been groundbreaking if not downright revolutionary He has also spent much of his adult life confined to a wheelchair a victim of ALS But his physical limitations have done nothing to confine him intellectually or hinder his scientific development Hawking would already be remarkable for his cutting edge work in theoretical physics alone However he has also managed to popularize science unlike any one else Today he is a household name and achieved almost cult like fame with the release of *A Brief History of Time* Although this book is steeped in the complexities of cosmology millions of people were eager to learn just some of what he had to offer Science writers White and Gribbin have painted a compelling portrait of a scientific mind that seemingly knows no bounds Weaving together clear explanations of Hawking's science with a detailed balanced and sensitive personal history we come to know and appreciate both sides of this incredible man Includes new updates in Hawking's biography and the recent discovery of the Higgs Boson or God particle

The Unbroken Soul Henri Parens, Harold P. Blum, Salman Akhtar, 2008-02-28. How do individuals cope constructively with significant trauma? How do they recover from it? What factors seem most codetermining of coping with and recovering from trauma? Can these be not only identified but also influenced by our interventions? Addressing these questions, questions about human beings' capacity for resilience is the prime challenge taken up in this book by an assortment of international psychoanalytic, attachment and biological mental health theorists and clinicians. While mental health professionals are well trained to identify and treat psychopathology, little is taught about how to look for strengths in patients that assist them in their coping and that on their own and with our nurturance can foster their recovery. Some of the contributors to this volume, having themselves been subjected to severe trauma, speak of resilience both from within their own experience and from those around them and from their work with traumatized patients. Successful Personal Statements to Get You into a Top University Warren Zhang, Hemant Mohapatra, 2014-02-20. This book will help aspiring undergraduates through the

competitive admissions process for some of the world's top universities. It will help prospective candidates answer a very specific question: what makes a successful personal statement? Using a collection of real-life personal statements from students recently accepted into Cambridge University across all subjects, the authors provide a behind-the-scenes look into what it takes to be admitted into a top academic institution. The result is a book that offers a rare insight into the often opaque and complex thought process that goes into accepting or rejecting a candidate and provides a benchmark for all students looking to study at top universities around the world.

The Science of Living Longer Gini Graham Scott JD, Ph.D., 2017-11-03. This thought-provoking book looks at humanity's quest for immortality and examines the latest research on extending one's life and possibly living forever, presenting an overview of technological innovations such as cryonics, cell rejuvenation, organ transplants using an exoskeleton, and brain transplants. With the seemingly limitless potential of 21st-century technology, the chance of human immortality being an actual possibility rather than a science-fiction concept is tantalizingly close. And with this increased possibility of achieving immortality, a growing community of people interested in immortality has formed worldwide. Organizations dedicated to great extension of human life now exist, focusing on technologies that reverse the damage caused by aging, transfer human consciousness to an artificial body, or cryogenically freeze those who hope to be brought back to life when technology to revive the body without cellular damage is developed. *The Science of Living Longer: Developments in Life Extension Technology* provides a fascinating look at the current state of the scientific research on how people can live significantly longer and possibly even forever. The book begins with an introductory section on the historical efforts to achieve immortality in Western and other cultures. Following chapters investigate different strands of research toward the common objective of achieving a longer life or even immortality. Other chapters address topics such as the health, wellness, and fitness movement designed to help individuals live longer; the biological methods such as cell rejuvenation designed to defeat aging; and the use of technology to provide an exoskeleton as body parts age or to download the brain into a computer or other body. Each chapter also suggests steps an individual can take to live longer too.
