The Family Good Health Guide John Fry, E. Gambrill, A. Moulds, G. Strube, 2012-12-06. Although we have no good definition of health, all people have their own ideas of whether they are healthy or not. Based on personal experience and knowledge, each person comes to accept that within themselves there is a normal range of feelings and performance, departure from which could be considered abnormal or unhealthy. Despite the many amazing technological advances made over recent decades, it cannot be said that access to advanced medical care is the main determining factor in the healthiness or otherwise of a society. Even in these modern times, most diseases and health problems are non-curable in the strict sense, and the scope for effective prevention of disease is more limited than some enthusiasts suggest. Individuals must appreciate the limitations of modern medical care and, while seeking to use the care available to the best possible effect, accept that the responsibility for trying to prevent major disease rests in their own hands. In this book, we have tried to present a balanced and realistic picture of the many factors that must be taken into account if optimum disease prevention and health maintenance are to be achieved. The health of your family is your responsibility. An understanding of what can go wrong, how it can be prevented, or how it can best be coped with, can only be helpful to you.

Linguistic Structure Prediction Noah A. Smith, 2022-05-31. A major part of natural language processing now depends on the use of text data to build linguistic analyzers. We consider statistical computational approaches to modeling linguistic structure. We seek to unify across many approaches and many kinds of linguistic structures. Assuming a basic understanding of natural language processing and/or machine learning, we seek to bridge the gap between the two fields. Approaches to decoding, i.e. carrying out linguistic structure prediction and supervised and unsupervised learning of models that predict discrete structures as outputs, are the focus. We also survey natural language processing problems to which these methods are being applied and we address related topics in probabilistic inference, optimization, and experimental methodology.
