Statistical Approaches to Measurement Invariance Roger E. Millsap, 2012-03-29 This book reviews the statistical procedures used to detect measurement bias Measurement bias is examined from a general latent variable perspective so as to accommodate different forms of testing in a variety of contexts including cognitive or clinical variables attitudes personality dimensions or emotional states Measurement models that underlie psychometric practice are described including their strengths and limitations Practical strategies and examples for dealing with bias detection are provided throughout The book begins with an introduction to the general topic followed by a review of the measurement models used in psychometric theory Emphasis is placed on latent variable models with introductions to classical test theory factor analysis and item response theory and the controversies associated with each being provided Measurement invariance and bias in the context of multiple populations is defined in chapter 3 followed by chapter 4 that describes the common factor model for continuous measures in multiple populations and its use in the investigation of factorial invariance Identification problems in confirmatory factor analysis are examined along with estimation and fit evaluation and an example using WAIS R data The factor analysis model for discrete measures in multiple populations with an emphasis on the specification identification estimation and fit evaluation issues is addressed in the next chapter An MMPI item data example is provided Chapter 6 reviews both dichotomous and polytomous item response scales emphasizing estimation methods and model fit evaluation The use of models in item response theory in evaluating invariance across multiple populations is then described including an example that uses data from a large scale achievement test Chapter 8 examines item bias evaluation methods that use observed scores to match individuals and provides an example that applies item response theory to data introduced earlier in the book The book concludes with the implications of measurement bias for the use of tests in prediction in educational or employment settings A valuable supplement for advanced courses on psychometrics testing measurement assessment latent variable modeling and or quantitative methods taught in departments of psychology and education researchers faced with considering bias in measurement will also value this book

The Neutral Theory of Molecular Evolution Motoo Kimura, 1985-01-10 Motoo Kimura as founder of the neutral theory is uniquely placed to write this book He first proposed the theory in 1968 to explain the unexpectedly high rate of evolutionary change and very large amount of intraspecific variability at the molecular level that had been uncovered by new techniques in molecular biology The theory which asserts that the great majority of

evolutionary changes at the molecular level are caused not by Darwinian selection but by random drift of selectively neutral mutants has caused controversy ever since This book is the first comprehensive treatment of this subject and the author synthesises a wealth of material ranging from a historical perspective through recent molecular discoveries to sophisticated mathematical arguments all presented in a most lucid manner

Whole Effluent Toxicity Testing Donald R. Grothe, Kenneth L. Dickson, Donna K. Reed-Judkins, 1996 Whole Effluent

Toxicity Testing contains the proceedings of a Pellston Workshop held September 16-21 1995 at the University of Michigan Biological Station on Douglas Lake to address issues surrounding the science of whole effluent toxicity testing and receiving system impact predictions. The proceedings reflect the current state of the art of these topics and focus on an assessment of 1 the appropriateness of whole effluent toxicity endpoints used in routine WET methods 2 the degree and causes of WET test method variability 3 biotic and abiotic factors that can influence measured field responses to effluents and 4 the relationship between effluent toxicity, ambient toxicity and receiving system impacts.

Introductory Statistics for the Health Sciences Lise DeShea, Larry E. Toothaker, 2015-03-25. Introductory Statistics for the Health Sciences takes students on a journey to a wilderness where science explores the unknown, providing students with a strong practical foundation in statistics. Using a color format throughout, the book contains engaging figures that illustrate real data sets from published research. Examples come from many areas.

Understanding Statistics Bruce J. Chalmer, 2020-01-29. Introducing undergraduates to the vital concepts of statistics, this superb textbook allows instructors to include as much or as little mathematical detail as may be suitable for their students. Featuring Statpal statistical software for the IBM PC, the book contains study questions that help solidify students' understanding of the material and prepare them for the next group of concepts. Many of the exercises, labeled Statpal exercises, are especially written for the Statpal statistical package. Understanding Statistics begins with the basic concepts of statistical inference, presents normal and binomial distributions, general techniques of interval estimation and hypothesis testing, and applications of these techniques to inferences about a single population mean and proportions, and covers inferences about group differences, including parametric and nonparametric approaches to the two-group case and the one-way ANOVA and its nonparametric analogue. In addition, this volume considers relationships between two variables, including the correlation coefficient, Spearman's ρ and Kendall's τ , surveys basic regression methods, including simple, multiple, and stepwise, and discusses the analysis of variance of factorial designs, the concept of interaction, and the analysis of categorical data using the chi-square test. Complete with tables and drawings, plus appendices that furnish instructions for using Statpal software, information on advanced topics, and much more, Understanding Statistics is an ideal text for undergraduate survey courses on statistical methods, as well as for courses in economics, psychology, sociology, education, business administration, and others that require basic statistics.

Biostatistics for Animal Science, 3rd Edition Miroslav Kaps, William R. Lamberson, 2017-06-23. Designed to cover techniques for analysis of data in the animal sciences, this popular textbook provides an overview of the basic principles of statistics, enabling the subsequent applications to be carried out with familiarity and understanding. Each chapter begins by introducing a problem with practical questions, followed by a brief theoretical background. Most topics are followed up with numerical examples to illustrate the methods described, using data sets from animal sciences and related fields. The same examples are then solved using the SAS software package. Written primarily for students and researchers in animal sciences, the text is also useful for

those studying agricultural biological and veterinary sciences

The Population Ecology of Interest Representation

Virginia Gray, David Lowery, 1996 This examination of lobbying communities explores how interest group populations are constructed and how they influence politics and public policy By examining how populations of interest groups are comprised this work fills an important gap between existing theories of the origins of individual interest groups and studies of interest group influence The population ecology model of interest communities developed here builds on insights first developed in population biology and later employed by organizational ecologists The model's central premise is that it is the environmental forces confronting interest organizations that most directly shape the contours of interest populations After examining the demography of interest organizations in the fifty American states the population ecology model is used to account for variations in the density and diversity of their interest communities the nature of competition among similar interest organizations to establish viable niches and the impact of alternative configurations of interest communities on the legislative process and the policies it produces These empirical findings suggest that the environment of interest communities is highly constraining limiting their size composition and potential impact on politics Virginia Gray is Professor of Political Science University of Minnesota David Lowery is Burton Craige Professor of Political Science University of North Carolina at Chapel Hill
