

PAGING AND DISPATCHING MICROPHONE**GENERAL**

The Shure Model 450 is a CONTROLLED MAGNETIC[®] microphone especially designed for high speed intelligibility and exceptional reliability for radio communications, paging, and dispatching systems. The microphone has a high output level, tailored response, and an omnidirectional pickup characteristic. The 450 can be converted to Monitor/Transmit switching with the Shure RK199S Split-Bar Conversion Kit.

Microphone Features:

- Dual impedance (low or high) with impedance switch for convenient changeover
- Finger-tip control bar (locking or non-locking action) to actuate microphone circuit and an external relay or control circuit
- Long-life switch to satisfy rigorous requirements of communications and paging systems
- Sturdy, high impact ARMO-DUR[®] base and microphone case
- Adjustable microphone height
- Dependability — under all operating conditions
- Conversion kit available for Monitor/Transmit switching

PRESS-TO-TALK SWITCH OPERATION

The finger-tip control bar can be used as a locking or nonlocking switch. To use as a nonlocking switch, simply depress the control bar and release after transmission. To use as a locking switch, depress the control bar and pull it forward. To unlock the switch, move the bar back and release.

IMPEDANCE SELECTION

High or low impedance is selected by the switch located on the underside of the microphone base near the cable entry. The microphone is shipped with the switch in the "HI" position.

The low-impedance connection is recommended where long cable lengths are required or under conditions of severe hum disturbance. The permissible cable length is practically unlimited, since neither response nor level is appreciably affected. Shure A85 Series Line Matching Transformers are available for use in those cases where a low-impedance microphone line is desirable but the associated amplifier has a high-impedance input. These transformers provide a proper impedance match between a 19 to 300 ohm microphone line and a high impedance input, and are available with various input and output connectors.

CONNECTIONS

Figure 1 shows the internal wiring of the 450 microphone.

For unbalanced high- or low-impedance operation, the white cable lead is the "hot" conductor for the microphone circuit; the GREEN cable lead and the shield are connected to the amplifier or chassis ground. Set the impedance switch to the proper position. The RED and BLACK leads control an external relay or switching circuit.

For balanced-line low-impedance operation, with the Impedance Switch in the "LO" position, the WHITE and GREEN cable leads are the "hot" conductors for the microphone circuit; the shield is connected to the amplifier or chassis ground. The RED and BLACK leads control an external relay or switching circuit.
