Vector Control of Three-Phase AC Machines Nguyen Phung Quang, Jörg-Andreas Dittrich, 2008-12-11 The book deals with the problem area of the vector control of the three phase AC machines like that one of the induction motor with squirrel cage rotor IMSR the permanent magnet excited synchronous motor PMSM and that one of the doubly fed induction machine DFIM from the view of the practical development It is primarily about the use of the IMSR as well as the PMSM in the electrical drive systems at which the method of the field oriented control has been successful in the practice and about the use of the grid voltage oriented controlled DFIM in the wind power plants After a summary of the basic structure of a field oriented controlled three phase AC drive the main points of the design and of the application are explained The detailed description of the design rules forms the main emphasis of the book The description is expanded and made understandable by numerous formulae pictures and diagrams Using the basic equations first the continuous and then the discrete machine models of the IMSR as well as of the PMSM are derived The vectorial two dimensional current controllers which are designed with help of the discrete models are treated in detail in connection with other essential problems like system boundary condition and control variable limitation Several alternative controller configurations are introduced The voltage vector modulation the field orientation and the coordinate transformations are treated also from the view of the practical handling The problems like the parameter identification parameter adaptation and the management of machine states which are normally regarded as abstract are so represented that the book reader does not receive only attempts but also comprehensible solutions for his system The practical style in the description of the design rules of the drive systems are also continued consistently for the wind power systems using the DFIM The represented control concept is proven practically and can be regarded as pioneering for new developments The introduced control structures of the three machine types have led to a relatively mature stage of development in the practice Some disadvantages have nevertheless remained at these linear control concepts which have to be cleared only with nonlinear controllers Going out from the structural nonlinearity of the machines the suitable nonlinear models are derived After that nonlinear controllers are designed on the basis of the method of the exact linearization which proves to be the most suitable in comparison with other methods like backstepping based or passivity based designs

Watching the Directives Great Britain: Parliament: House of Commons: Science and Technology Committee, 2006-06-29 The EU Physical Agents Electromagnetic Fields Directive which was adopted in April 2004 and must be enshrined in law in EU member states by April 2008 sets out exposure limits designed to provide a minimum standard of protection from occupational exposure to electromagnetic fields EMF The Committee's report focuses on the impact of this Directive on the use of magnetic resonance imaging MRI equipment for diagnosis treatment and research use This is the first of three case studies under the Committee's overarching inquiry into the way scientific evidence and advice is used by the UK Government to influence policy at EU level It finds that there were failings in the way scientific advice was used to inform the Directive both in Brussels and in the UK The European Commission relied too heavily

on one source of advice and was not sufficiently responsive to concerns raised by the magnetic resonance community whilst there was serious failings in the consultation process in the UK particular by the Health and Safety Executive and by the Health Protection Agency

Characterization of Fly Ash for Use in Concrete Turgut Demirel, 1983 Recent construction of new generation power plants burning western coal within Iowa has resulted in fly Ash production on the order of 760 000 tons annually Although fly ash has long been accepted as a valuable replacement for portland cement in concrete most experience has been with fly ash generated from eastern bituminous coals A few years ago fly ash in Iowa was not a significant factor because production was small and economics dictated disposal as the better alternative than construction use Today the economic climate coupled with abundance of the material makes constructive use in concrete feasible The problem is however fly ash produced from new power plants is different than that for which information was available It seems fly ash types have outgrown existing standards The objective of this study was to develop fundamental information about fly ashes available to construction in Iowa such that its advantages and limitations as replacement to portland cement can be defined Evaluative techniques used in this work involve sophisticated laboratory equipment not readily available to potential fly ash users so a second goal was preliminary development of rapid diagnostic tests founded on fundamental information Lastly Iowa Department of Transportation research indicated an interesting interdependency among coarse aggregate type fly ash and concrete's resistance to freeze thaw action Thus a third charge of this research project was to verify and determine the cause for the phenomena One objective of this project was to determine properties of Iowa fly ashes and evaluate their relevance to use of the material as an admixture of PCC This phase of the research involved two approaches The first involved the development of a rapid method for determining quantitative elemental composition while the second was aimed at both qualitative and quantitative determination of compounds X ray fluorescence techniques were adapted for rapid determination of elemental composition of fly ash The analysis was performed using a Siemens SR 200 sequential x ray spectrometer controlled by a PDP 11 03 microcomputer The spectrometer was equipped with a ten sample specimen chamber and four interchangeable analyzing crystals Unfiltered excitation radiation was generated using a chromium tube at 50 KV and 48 ma Programs for the spectrometer were developed by the Siemens Corporation

Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro, Ramon Vilanova, 2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules In later chapters the application of MoReRT to over damped inverse response integrating and unstable processes

is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems
