Natural Selection

6. Complete the summary of Natural Selection.

Natural Selection was proposed by Charles Darwin to explain how new species evolve. All types of living things have small differences between the individuals in the species. If one of those differences allows the individual to live longer, they will have more offspring. As that trait is passed on, the species starts to look more like the successful individual. Overtime, the species changes.

7. In the last 50 years, most industrial countries have reduced the amount of pollution. Based on the theory of natural selection, describe the moth population today.

The dark moths are dropping because the forests are becoming cleaner.
