in April 1975 which marked the coming of age of this field and led to the founding of the Cardiovascular System Dynamics Society. The conference brought together outstanding researchers in the life sciences, biology, physiology, medicine, and the physical sciences, biophysics, bioengineering, in order to integrate their findings more intricately and to chart the present state and future directions of the field. Since the cardiovascular system has been one of the first areas to receive attention under the newly emerging symbiosis between engineering and medicine, the book also serves a useful secondary purpose as a model of what can be accomplished by such integrated effort. The papers are organized into 12 sections. The first 9 offer a tour of the cardiovascular system with papers arranged within each section to lead the reader from theoretical to clinical viewpoints. Included are sections on cardiac muscle, coronary circulation, ventricular dynamics, systemic arterial tree, microcirculation, systemic veins, pulmonary vasculature, control mechanisms in specific vascular beds, and cardiovascular system control. The last 3 sections offer tutorial overviews of theoretical and experimental methods applied to the cardiovascular system and of cardiovascular instrumentation and computer analysis.

Multiple Literacies for Dance, Physical Education and Sports Stephen G. Mogge, Shelly Huggins, Jaye Knutson, Elin E. Lobel, Pamela Segal, 2023-03-14. This book explores a spectrum of literacies relevant to dance, physical education, and sports. It examines conceptions of movement literacies, disciplinary literacies, and traditional school literacies. It includes theory, research, and instructional practice related to the uses of traditional print, multimedia, and embodied physical literacies. These literacies function independently but are also overlapping and mutually reinforcing in comprehensive instructional planning. As movement and activity-related fields continue to explore the potential for multiple literacies, this book introduces numerous possibilities, both conceptual and practical, for consideration. Pre-service and in-service teachers in dance and physical education programs will learn how to integrate multiple literacies in curriculum design and teaching. Graduate students will examine theoretical premises of movement and disciplinary literacies and become familiar with original research on these topics. Teachers, school administrators, coaches, and athletic directors will use the book in order to guide the inclusion of movement and activity-based fields in the disciplinary literacy agenda now common in Pre-K through secondary schooling. Media-rich chapters, including photographic, video, and other graphic images, allow students to access concepts through multiple modalities.
