S. Wahl,1966 **Face-balanced, Venn and PolyVenn Diagrams** Bette Bultena,University of Victoria (B.C.). Dept. of Computer Science,2013 A simple n Venn diagram is a collection of n simple intersecting closed curves in the plane where

exactly two curves meet at any intersection point the curves divide the plane into $2n$ distinct open regions each defined by its intersection of the interior or exterior of each of the curves A Venn diagram is reducible if there is a curve that when removed leaves a Venn diagram with one less curve and irreducible if no such curve exists A Venn diagram is extendible if another curve can be added producing a Venn diagram with one more curve Currently it is not known whether every simple Venn diagram is extendible by the addition of another curve We show that all simple Venn diagrams with 5 curves or less are extendible to another simple Venn diagram We also show that for certain Venn diagrams a new extending curve is relatively easy to produce We define a new type of diagram of simple closed curves where each curve divides the plane into an equal number of regions we call such a diagram a face balanced diagram We generate and exhibit all face balanced diagrams up to and including those with 32 regions these include all the Venn diagrams Venn diagrams exist where the curves are the perimeters of polyominoes drawn on the integer lattice
