Computing and Investigations for Everyone Eamon Doherty, G. Don Purdy, Joel & Todd Liesbesfeld, 2008-09 This Everyone book attempts to guide the reader through the more essential steps of understanding the basic principles or elements that constitute the daily work of investigators in fields relating to computing and electrical loss The chapters are meant to set a foundation for people who may want to enter the field of investigations or are at the beginning of a career in the area or are seasoned investigators looking to delve into more contemporary areas of investigations or for persons that are just interested in reading about matters or topics that are currently revealed in differing forms of media such as in the successful TV drama series CSI The book is formatted sequentially so that the reader can review important legal matters that are a part of most investigations and then go on to peruse the elements of basic electrical principles as they apply to certain types of fire and fault losses These beginning chapters set a broad stage for the various areas of computing that follow The book does not necessarily have to be read in the order that it was written In a sense the reader may choose to use the book as a reference book The chapters were written for the most part to be able to stand alone as monographs There are many chapters that review a broad range of more common topics and there are chapters concerned with more esoteric areas of computing and electronics Some of these chapters discuss the high tech methods that are sometimes deployed by thieves terrorists pedophiles stalkers etc All of the co authors reflect their experience as individuals that work closely with the criminal justice and civil institutions

Electric Renewable Energy Systems Muhammad H. Rashid, 2015-11-25 This derivative volume stemming from content included in our seminal Power Electronics Handbook takes its chapters related to renewables and establishes them at the core of a new volume dedicated to the increasingly pivotal and as yet under published intersection of Power Electronics and Alternative Energy While this re versioning provides a corollary revenue stream to better leverage our core handbook asset it does more than simply re package existing content Each chapter will be significantly updated and expanded by more than 50% and all new introductory and summary chapters will be added to contextualize and tie the volume together Therefore unlike traditional derivative volumes we will be able to offer new and updated material to the market and include this largely original content in our ScienceDirect Energy collection Due to the inherently multi

disciplinary nature of renewables many engineers come from backgrounds in Physics Materials or Chemical Engineering and therefore do not have experience working in depth with electronics As more and more alternative and distributed energy systems require grid hook ups and on site storage a working knowledge of batteries inverters and other power electronics components becomes requisite Further as renewables enjoy broadening commercial implementation power electronics professionals are interested to learn of the challenges and strategies particular to applications in alternative energy This book will bring each group up to speed with the primary issues of importance at this technological node This content clarifies the juncture of two key coverage areas for our Energy portfolio alternative sources and power systems It serves to bridge the information in our power engineering and renewable energy lists supporting the growing grid cluster in the former and adding key information on practical implementation to the latter Provides a thorough overview of the key technologies methods and challenges for implementing power electronics in alternative energy systems for optimal power generation Includes hard to find information on how to apply converters inverters batteries controllers and more for stand alone and grid connected systems Covers wind and solar applications as well as ocean and geothermal energy hybrid systems and fuel cells
