Sustainable Food Systems Robert Biel, 2016-12-05 Faced with a global threat to food security it is perfectly possible that society will respond not by a dystopian disintegration but rather by reasserting co operative traditions This book by a leading expert in urban agriculture offers a genuine solution to today s global food crisis By contributing more to feeding themselves cities can allow breathing space for the rural sector to convert to more organic sustainable approaches Biel s approach connects with current debates about agroecology and food sovereignty asks key questions and proposes lines of future research He suggests that today s food insecurity manifested in a regime of wildly fluctuating prices reflects not just temporary stresses in the existing mode of production but more profoundly the troubled process of generating a new one He argues that the solution cannot be implemented at a merely technical or political level the force of change can only be driven by the kind of social movements which are now daring to challenge the existing unsustainable order Drawing on both his academic research and teaching and 15 years experience as a practicing urban farmer Biel brings a unique interdisciplinary approach to this key global issue creating a dialogue between the physical and social sciences

Sterilization of Food in Retort Pouches A.G. Abdul Ghani Al-Baali, Mohammed M. Farid, 2007-11-12 Sterilization of canned food is a well known technology that has been in practice for many decades Food sterilization has been well studied in a large number of textbooks This book is not about the science of sterilization or food safety but rather about the important interaction between uid mechanics heat transfer and microbial inactivation Such interaction is complex and if ignored would lead to incorrect information not only on food sterility but also on food quality The book is written by engineers for both food engineers and scientists However it may also be of interest to those working in computational uid dynamics CFD It presents an elementary treatment of the principles of heat transfer during thermal sterilization and it contains sufficient material presented at a high level of mathematics A background in the solution of ordinary and partial differential equations is helpful for proper understanding of the main chapters of this book However we have avoided going into a detailed numerical analysis of the finite volume method FVM of solutions used to solve the sets of equations Some familiarity with uid dynamics and heat transfer will also be helpful but not essential In this book

conduction and convective heat transfer is treated such that the reader is offered the insight that is gained from analytical solutions as well as the important tools of numerical analysis which must be used in practice Analysis of free convection is used to present a physical picture of the convection process

and Neuroscience: Justice as a Challenge for Neurorights, Neurolaw, and Forensic Psychology Eric

García-López, Eduardo Demetrio Crespo, Cristina Nombela Otero, Federica Coppola, 2025-05-29 Justice is one of the most complex issues in the study of Law Philosophical sociological and religious studies have attempted to articulate this value central to human coexistence throughout history More recently specialised sub disciplines such as Legal Psychology have significantly contributed to refining the relationship between Law and Justice by enriching the study of these normative domains with empirical knowledge about social interactions In more recent developments the discipline of Neurolaw has begun to offer new insights into the analysis of the longstanding and disputed issues surrounding Law and Justice Neurolaw can be defined as the analysis of Law and Justice from the perspective of Neuroscience and involves an understanding of human behavior through the study of the brain s interactions with the environment Neuroscience appears to provide a more up to date understanding of human behavior focussing on the legal and forensic implications Yet neuroscientific studies of crime fail to grasp the impact of broader socio contextual contingencies on human conduct including institutional failures gender dynamics and cultural power Such a failure evidences the limits of neuroscience as a complete epistemological tool It is too narrow to provide a complete understanding of complex human conduct like crime as it involves a careful examination of the variegated interactions between various social and biological levels This Research Topic addresses the need for developing a holistic theoretical framework that considers not only the biological nature of human beings but also the social cultural and political influences on human behavior Such a holistic approach is necessary to clarify some foundational philosophical questions including subjectivity and consciousness as well as the role that these concepts play within the notion of criminal liability and punishment In addition to these unresolved philosophical questions there is also the need for a revised legal and forensic approach that grasps a more nuanced and complex understanding of human conduct Topics for contributions include but are not limited to the following Neuroscience Law and Criminal Justice Neuroscience Law and Social Justice Neuroscience Law and Racial Justice Neuroscience and Restorative Justice Neurorights Neuroethics Criminal responsibility Decision making Juvenile Criminal Law and Punishment Free will Ethical legal and social repercussions of the neurotechnologies currently available as well as of those that are currently being developed We welcome submissions from authors with backgrounds in law justice philosophy forensic neuropsychology forensic cognitive social psychology forensic psychiatry criminology sociology addressing theoretical methodological or empirical issues related to these topics and other related ones Cross inter and multidisciplinary contributions are of course welcome *LCA and TEA for Sustainable*
