VanLoon, Stephen J. Duffy, 2000 This manual contains the worked solutions to the end of chapter problems presented in the parent undergraduate textbook Environmental Chemistry by van Loon and Duffy Problem solving is an indispensable aspect of learning giving students a feel for the quantities involved and how to manipulate them These worked problems supplement the main book Plant-Soil Interactions at Low pH Robert J. Wright, V.C. Baligar, R. Paul Murrmann, 2012-12-06 Soil acidity is a major limitation to crop production in many parts of the world Plant growth inhibition results from a combination of factors including aluminum manganese and hydrogen ion toxicities and deficiencies of essential elements particularly calcium magnesium phosphorus and molybdenum Agricultural management practices and acid precipitation have increased acid inputs into the ecosystem and heightened concern about soil acidity problems While application of lime has proved to be effective in ameliorating surface soil acidity in many areas significant soil acidity problems still exist Scientists from Alberta Canada recognized the need to provide a forum for researchers from different disciplines to exchange information and ideas on solving problems of plant growth in acid soils As a result of their efforts the First International Symposium on Plant Soil Interactions at Low pH was held at Grande Prairie Alberta Canada in July 1987 In many acid soil areas liming materials are not readily available the cost may be prohibitive or subsoil acidity cannot be corrected by surface application of lime New management approaches involving both the plant and the soil are needed in these situations Progress has been made in the selection and breeding of acid tolerant plants However continued progress will be limited by our lack of understanding of the physiological and biochemical basis of differential acidity tolerance among plants **El-Hi Textbooks in Print**, 1984
