Internationalising Japan Jeremy Breaden,Stacey Steele,Carolyn S. Stevens,2014-04-24 In the twenty first century the concept of internationalisation remains a crucial tool for understanding the dynamics of globalising processes It draws attention to the dimensions of conscious action in inter and trans national phenomena connecting globalisation with individuals experience of everyday life This book explores how internationalisation is imagined discussed and operationalised in Japan and surrounding countries The chapters focus on educational leisure and cultural activities fields which are often

overlooked in favour of economic and political developments in the literature The conclusion reflects on the concept of internationalisation and assesses how it is likely to develop in Japan in future taking into account the impact of the Great East Japan Earthquake of 2011 Preclinical and clinical issues in Alzheimer's disease drug research and development Cesare

Mancuso, Silvana Gaetani, 2015-03-03 Alzheimer's disease AD is a chronic neurodegenerative disorder characterized by progressive cognitive dysfunction and memory loss inability to perform the activities of daily living and mood disorders According to the so called amyloid cascade hypothesis amyloid peptide A produced by beta and gamma secretase mediated cleavages of the amyloid precursor protein APP plays a pivotal role in the pathogenesis of AD A was also shown to contribute to AD pathology by stimulating the hyperphosphorylation of tau which is responsible for the formation of neurofibrillary tangles However the amyloid cascade hypothesis was challenged by other theories which lend support to the idea that A is not causative but can be considered as an innocent bystander in AD Although preclinical research generated impressive lines of evidence about the several intracellular mechanisms whose impairment leads to the onset and progression of AD clinical research aimed at the development of new drugs capable of preventing or delaying the onset of neuronal damage in AD patients has produced limited results The drugs currently available for the treatment of AD are acetylcholinesterase inhibitors AChEI and the NMDA glutamate receptor antagonist memantine The AChEI increase acetylcholine levels in the synaptic cleft which are reduced because of the progressive damage of cholinergic neurons in cognitive brain areas e.g. amygdala hippocampus and frontal cortex whereas memantine is used to prevent reduce calcium dependent excitotoxic neuronal cell death Both classes of drugs have been shown to improve symptoms related to cognitive decline but their effects are confined largely to patients with mild to moderate AD in particular during the first year or so of treatment An alternative to this symptomatic treatments involves the use of drugs that intervene in the pathogenesis of the disease Recently monoclonal antibodies against A were proposed as novel agents capable to remove A from the brain thus preventing neuronal damage The research topic focuses on the preclinical and clinical evidence about the several factors that contribute to the pathogenesis of AD as well as the potential therapeutic role of new classes of drugs still under preclinical or clinical development **Adaptations to Advanced Resistance Training Strategies in Youth and Adult Athletes** Olaf

Thiol-based redox homeostasis and signalling Francisco J. Cejudo,Andreas J.

Meyer,Jean-Philippe Reichheld,Nicolas Rouhier,Jose A. Traverso,2014-09-24 In contrast to the situation in heterotrophic organisms plant genomes code for a significantly larger number of oxidoreductases such as thioredoxins TRXs and glutaredoxins GRXs These proteins provide a biochemical mechanism that allows the rapid and reversible activation or deactivation of protein functions in response to changing environmental conditions as oxidative conditions caused by excessive photosynthesis Indeed owing to the fact that cysteines are sensitive to oxidation TRXs and GRXs play an essential role in controlling the redox state of protein thiol groups These redox dependent post translational modifications have proven to be critical for many cellular functions constituting regulatory signalling or protective mechanisms The articles contained in this Research Topic provide timely overviews and new insights into thiol dependent redox regulation mechanisms with a focus on TRX and GRX based reduction systems in plants The different contexts discussed take into account physiological developmental and environmental conditions
