Kashyap, George Newcombe, Gustavo Santoyo, 2022-06-27 **The Urban Ecologies of Divided Cities** Amira Osman, John Nagle, Sabyasachi Tripathi, 2023-06-12

The book discusses how division affects the fabric of cities and people's sense of identity and agency and are reflected in physical features architecture and urban planning. The question of divided cities represents a complex and multistranded urban Ecology at once both social and spatial; it cannot be limited to a single science or discipline such as social or spatial fields. This suggests integrated and cross disciplinary understandings as well as integrated or parallel approaches and solutions. Urban ecologies of division manifest in multiple forms. One of their most palpable expressions is conflict with parallels around the world and often with correlations in the spatial fabric. Violence in such contexts is often a surface expression of deeper socio economic or ideological differences. Whether as a result of intervention by authority or by dissent between groups, a divided city inevitably becomes a place of conflict in various forms and intensity, eroding the joy of living and sense of collective belonging to the detriment of all. In effect, it erodes the collective advantage of being part of a more unified society. A city exists in collections of social structures which mutually form a society. A divided city implies divided social structures and in consequence a divided society. The papers compiled in this book present many case studies of divided cities, discussing the different causes of divisions and their effects on societies. Some of the causes can be linked to conflicts, wars, colonialism, or legislative political systems. In response to the serious challenges resulting from these divisions, the book aims to provide opportunities for new approaches and possibilities for new interventions and solutions, making it significant to urban planners, architects, and policymakers.

Analysis and Design of Hybrid Energy Storage Systems Jorge Garcia, 2020-04-17

The most important environmental challenge today's society is facing is to reduce the effects of CO₂ emissions and global warming. Such an ambitious challenge can only be achieved through a holistic approach capable of tackling the problem from a multidisciplinary point of view. One of the core technologies called to play a critical role in this approach is the use of energy storage systems. These systems enable, among other things, the balancing of the stochastic behavior of Renewable Sources and Distributed Generation in modern Energy Systems, the efficient supply of industrial and consumer loads, the development of efficient and clean transport, and the development of Nearly Zero Energy Buildings (nZEB) and intelligent cities. Hybrid Energy Storage Systems (HESS) consist of two or more storage devices with complementary key characteristics that are able to behave jointly with better performance than any of the technologies considered individually. Recent developments in storage device technologies, interface systems, control and monitoring techniques, or visualization and information technologies have driven the implementation of HESS in many industrial, commercial, and domestic applications. This Special Issue focuses on the analysis, design, and implementation of hybrid energy storage systems across a broad spectrum encompassing different storage technologies, including electrochemical, capacitive, mechanical, or mechanical storage devices, engineering branches, power electronics, and control strategies, energy engineering, energy engineering chemistry, modelling, simulation, and emulation techniques, data analysis.
