phytohormones regulate key physiological events under normal and stressful conditions for plant development. Accumulative research efforts have discovered important roles of phytohormones and their interactions in regulation of plant adaptation to numerous stressors. Intensive molecular studies have elucidated various plant hormonal pathways each of which consist of many signaling components that link a specific hormone perception to the regulation of downstream genes. Signal transduction pathways of auxin, abscisic acid, cytokinins, gibberellins, and ethylene have been thoroughly investigated. More recently emerging signaling pathways of brassinosteroids, jasmonates, salicylic acid, and strigolactones offer an exciting gateway for understanding their multiple roles in plant physiological processes. At the molecular level, phytohormonal crosstalks can be antagonistic or synergistic or additive in actions. Additionally, the signal transduction components of one hormonal pathway may interplay with the signaling components of other hormonal pathways. Together, these and other research findings have revolutionized the concept of phytohormonal studies in plants. Importantly, genetic engineering now enables plant biologists to manipulate the signaling pathways of plant hormones for development of crop varieties with improved yield and stress tolerance. This book, written by internationally recognized scholars from various countries, represents the state of the art understanding of plant hormones, biology, signal transduction, and implications. Aimed at a wide range of readers including researchers, students, teachers, and many others who have interests in this flourishing research field, every section is concluded with biotechnological strategies to modulate hormone contents or signal transduction pathways and crosstalk that enable us to develop crops in a sustainable manner. Given the important physiological implications of plant hormones in stressful environments, our book is finalized with chapters on phytohormonal crosstalks under abiotic and biotic stresses.

International Investment Management Kara Tan Bhalu, Warren Yeh, Raj

Bhalu, 2016-04-14 International Investment Management: Theory, Practice, and Ethics synthesizes investment principles, Asian financial practice, and ethics reflecting the realities of modern international finance. These topics are studied within the Asian context first through the medium of case studies and then via the particular conditions common in those markets, including issues of religion and philosophy. This book has a three-part structure beginning with the core principles behind the business of investments, including securities analysis, asset allocation, and a comprehensive analysis of modern finance theory. This gives students a comprehensive understanding of investment management by going through the theories, ethics, and practice of investment management. This text provides a detailed overview of International Banking Law and International Securities Regulation alongside legal and ethics case studies which are located in the practice section of the book. This book is an essential text for business and law school students who wish to have a thorough understanding of investment management. It is also perfect as a core text for undergraduate finance majors and graduate business students pursuing a finance and/or business ethics concentration with particular focus on Asia.

Systems Biology of Transcription Regulation Ekaterina

Shelest, Edgar Wingender, Joerg Linde, 2016-09-09 Transcription regulation is a complex process that can be considered and

investigated from different perspectives Traditionally and due to technical reasons including the evolution of our understanding of the underlying processes the main focus of the research was made on the regulation of expression through transcription factors TFs the proteins directly binding to DNA On the other hand intensive research is going on in the field of chromatin structure remodeling and its involvement in the regulation Whatever direction we select we can speak about several levels of regulation For instance concentrating on TFs we should consider multiple regulatory layers starting with signaling pathways and ending up with the TF binding sites in the promoters and other regulatory regions However it is obvious that the TF regulation also including the upstream processes represents a modest portion of all processes leading to gene expression For more comprehensive description of the gene regulation we need a systematic and holistic view which brings us to the importance of systems biology approaches Advances in methodology especially in high throughput methods result in an ever growing mass of data which in many cases is still waiting for appropriate consideration Moreover the accumulation of data is going faster than the development of algorithms for their systematic evaluation Data and methods integration is indispensable for the acquiring a systematic as well as a systemic view In addition to the huge amount of molecular or genetic components of a biological system the even larger number of their interactions constitutes the enormous complexity of processes occurring in a living cell organ organism In systems biology these interactions are represented by networks Transcriptional or more generally gene regulatory networks are being generated from experimental ChIPseq data by reverse engineering from transcriptomics data or from computational predictions of transcription factor TF target gene relations While transcriptional networks are now available for many biological systems mathematical models to simulate their dynamic behavior have been successfully developed for metabolic and to some extent for signaling networks but relatively rarely for gene regulatory networks Systems biology approaches provide new perspectives that raise new questions Some of them address methodological problems others arise from the newly obtained understanding of the data These open questions and problems are also a subject of this Research Topic

countries that have to properly implement the OECD recommendations in their domestic laws as well as in their tax treaty practice In this respect a comprehensive analysis in the literature of all the issues related to base erosion proves to be of the utmost importance in order to provide practical guidance to the Member countries during that the process of implementation This book deals especially with four key areas of interest Limiting base erosion by neutralizing the effects of hybrid mismatch arrangements Limiting base erosion by strengthening CFC rules Measures against base erosion via interest deductions and other financial payments Limiting base erosion by improving transfer pricing rules On that basis 27 concrete topics were chosen in order to address the four key areas of interest from different viewpoints Base erosion and the challenges they present read more in Limiting Base Erosion

Charcoal, Food, and Water Production in the Tropics: Applying Nexus Thinking to Improve Research and Policy Approaches in Complex Landscapes Tuyeni Heita Mwampamba, Adrian Ghilardi, Rob Bailis, 2020-02-04 Editorial Tuyeni H Mwampamba Rob Bailis Adrian Ghilardi Urbanization food and water consumption trends in many tropical countries show that demand for charcoal as a source of cooking energy meat grain and water will rise to proportions that surpass the ability of existing ecosystems to supply these services simultaneously and at desired qualities Consequently drastic changes to policy and practice are needed to improve ecosystem potential and or alter demand trends Traditional charcoal production in sub Saharan Africa South East Asia and Latin America often competes or co exists with livestock keeping and agriculture and has a tendency to occur in water limited woodlands The co occurrence of charcoal and food production results in complex landscapes characterized by strong interactions between subsystems managed by multiple sets of actors with potentially competing objectives These social ecological systems provide goods and services that are essential to millions of people throughout the global south Nevertheless there have been very few detailed studies of such systems particularly on the individual and combined effects of charcoal crop and livestock production on the hydrological system that maintains them and vice versa As a result these multi use landscapes are typically managed by short sighted highly generalized mono sectorial policies that ignore important tradeoffs and undercapitalize on synergies A system level approach could provide important insights that improve and expand current understanding of this energy food water nexus Tackling urgent and complex problems composed of multiple and interrelated factors lies at the heart of nexus thinking an approach that examines the inter relatedness and interdependencies of environmental resources and their transitions and fluxes across spatial scales and between compartments UNU FLORES 2015 and relies on interdisciplinary research and multi sector policy teams It has attracted significant interest from international organizations the private sector and governments as a way to develop integrated equitable solutions that involve inputs from multiple stakeholders However this approach is notably absent in the research arena Identifying appropriate interventions for achieving sustainable charcoal and food production and maintaining the underlying hydrological system on which they depend requires that the systems are considered simultaneously and that their biophysical social and political inter relations are well understood Taking charcoal

as the nexus entry point this Research Topic aims to generate new understanding of charcoal production systems by incorporating agriculture and hydrology into the matrix We were interested in empirical articles reviews meta analytical articles and perspective papers that address at least two of the three nexus components and which offer provocative and insightful perspectives into the nexus as a whole We hope that this Research Topic will 1 facilitate identification of research gaps policy opportunities and priorities for the nexus 2 kick start the development of a community of researchers and practitioners working on the nexus and 3 permit the development of a research agenda that explores the nexus globally across multiple study sites

Transcriptional Regulation by Neuronal Activity Ramendra N. Saha,Serena M. Dudek,2024-11-12 This book discusses the regulation of gene transcription by neuronal activity that is evident in a large number of neuronal processes ranging from neural development and refinement of neuronal connections to learning and response to injury Transcriptional Regulation by Neuronal Activity To the Nucleus and Back 2nd edition illustrates how signals are transmitted to the nucleus in response to neuronal activity which genes are regulated and how this is achieved and how these changes in gene expression alter neuronal function The aim of this second edition is to highlight key advances in the field since the first edition The book is divided into four sections The first highlights how signals get to the nucleus from the membrane in response to synaptic or neuronal activity Included are chapters on the pathways that transmit signals from synapses to nuclei The second section focuses on epigenetic regulatory processes of activity induced gene transcription an area that has exploded in the past few years The third section navigates the role of activity induced genes in physiological processes such as learning and memory and human developmental disorders such as those associated with the autism spectrum The fourth section highlights groundbreaking technological advances in the field

which have allowed activity regulated transcription to be used as a tool to study learning and memory
