This book comprises the full selected Regular Lectures from the Proceedings of the 12th International Congress on Mathematical Education ICME 12 which was held at COEX in Seoul Korea from July 8th to 15th 2012 ICME 12 brought together 4700 experts from 100 countries working to understand all of the intellectual and attitudinal challenges in the subject of mathematics education as a multidisciplinary research and practice These selected Regular Lectures present the work of fifty one prominent mathematics educators from all over the globe The Lectures cover a wide spectrum of topics themes and issues and aim to give direction to future research towards educational improvement in the teaching and learning of mathematics education This book is of particular interest to researchers teachers and curriculum developers in mathematics education

The Australian Mathematics Teacher, 1993 **Gazette - Australian Mathematical Society** Australian Mathematical Society, 2004 *Sociocultural Research on Mathematics Education* Bill Atweh, Helen Forgasz, Ben Nebres, 2013-03-07 This volume the first to bring together research on sociocultural aspects of mathematics education presents contemporary and international perspectives on social justice and equity issues that impact mathematics education In particular it highlights the importance of three interacting and powerful factors gender social and cultural dimensions Sociocultural Research on Mathematics Education An International Perspective is distinguished in several ways It is research based Chapters report on significant research projects present a comprehensive and critical summary of the research findings and offer a critical discussion of research methods and theoretical perspectives undertaken in the area It is future oriented presenting recommendations for practice and policy and identifying areas for further research It deals with all aspects of formal and informal mathematics education and applications and all levels of formal schooling As the context of mathematics education rapidly changes with an increased demand for mathematically literate citizenship an increased awareness of issues of equity inclusivity and accountability and increased efforts for globalization of curriculum development and research questions are being raised more than ever before about the problems of teaching and learning mathematics from a non cognitive science perspective This book contributes significantly to addressing such issues and answering such questions It is especially relevant for researchers graduate students and policymakers in the field of mathematics education

The Mathematical Scientist, 1980 *Collaboration, Communities and Competition* Samuel Dent, Laura Lane, Tony Strike, 2017-08-25 Higher Education providers face enormous challenges in an increasingly competitive and globalised environment It is perhaps obvious to those engaged in teaching and research that academia is both a competitive and a collaborative endeavour Many national systems now assume in their legal or governance frameworks competitive rather than co operative behaviour and increasingly regulate based on that assumption Institutional leaders and educators wrestle with the issues around the commoditisation of learning and the pressure to treat students as customers In tandem students

themselves are experiencing cuts in public financing and a transfer of the cost burden to them as the perceived private beneficiaries of a product This book asks whether there is an alternative approach to this now transnational competitive logic Can collaboration and partnership re emerge as an antidote to the consumerist and competitive approaches taken by governments toward regulating their higher education systems The question of competition collaboration and community is addressed here at three levels of analysis The macro level or the international system level observes competition and collaboration between countries and between institutions The meso level includes competition and collaboration between academics and students and at inter and intra disciplinary levels across organisational boundaries Finally competition and collaboration at the micro level considers the interface between individual academics and between academics and students as learners
