

# The anatomy of arousal: three Internet portals

PATRICK J. CARNES

*The Meadows, Weybridge, Surrey, UK*

*Abstract:* Internet sexual behaviour offers a unique opportunity to understand processes which influence arousal. This paper studies the internet as a source of accelerated perception for individuals by examining three different genres of internet behaviour: 'Traffic' sites, 'click and' sites, and 'groups' sites. It uses all three sites as examples of technologies that create the accelerated cycle, with its parallelism, and unique pattern of sexual affective processes provided. All three examples show communication structures implications for both research and therapy. Specific recommendations for clinical assessment and further research are made.

## The anatomy of arousal: three Internet cases

A classic problem school says about 'accelerated perception' is told about a video taping of a playground to study child interactions. When the video was played at normal speed no unusual patterns of social interaction could be discerned amongst the children. By playing the tape at high speed, patterns emerged which were not discernible at normal speeds. In the video, for example, there was one girl who clearly was a catalyst for all the activity of the playground. But only was clearly visible at normal speed. At high speed she became present to all the interactions on the playground. The story is told to illustrate how technological shifts can reveal patterns in human processes. Normal viewing of the content is a classic example of accelerated perception where we are able to see social processes more clearly than before. The speed and the impact of cybersex have literally opened a whole new field of sexual research, the outlines of which are just emerging.

In many ways the impact of cybersex has been positive. Substantial sexual collection has occurred for those who are now able to connect others with similar sexual interests. Matching programs have facilitated people meeting others, which would never before have been possible. Sexual information and resources are now easily accessible. In short the internet is helping break down sexual stereotypes and bringing us a world of ways. On the dark side of this scenario there are troubling patterns of cybersexism at a level not seen before. This paper explores three examples in which the utilization of cybersex can become negative, competitive, or toxic. First,
