The Arrows Of Time Orthogonal Book Three:

Arrows of Time Greg Egan, 2014-07-21 In an alien universe where space and time play by different rules interstellar voyages last longer for the travellers than for those they left behind After six generations in flight the inhabitants of the mountain sized spacecraft the Peerless have used their borrowed time to develop advanced technology that could save their home world from annihilation But not every traveller feels allegiance to a world they have never seen and as tensions mount over the risks of turning the ship around and starting the long voyage home a new complication arises the prospect of constructing a messaging system that will give the Peerless news of its own future While some of the crew welcome the opportunity to be warned of impending dangers and perhaps even hear reports of the ship's triumphant return others are convinced that knowing what lies ahead will be oppressive and that the system will be abused Agata longs for a chance to hear a message from the ancestors back on the home world proving that the sacrifices of the travellers have not been in vain but her most outspoken rival Ramiro fears that the system will undermine every decision the travellers make When a vote fails to settle the matter and dissent erupts into violence Ramiro Agata and their allies must seek a new way to bring peace to the Peerless by traveling to a world where time runs in reverse The Arrows of Time is the final volume of the Orthogonal trilogy bringing a powerful and surprising conclusion to the epic story of the Peerless that began with The Clockwork Rocket and The Eternal Flame

Greg Egan Karen Burnham, 2014-04-30 Greg Egan 1961 publishes works that challenge readers with rigorous deeply informed scientific speculation He unapologetically delves into mathematics physics and other disciplines in his prose putting him in the vanguard of the hard science fiction renaissance of the 1990s A working physicist and engineer Karen Burnham is uniquely positioned to provide an in depth study of Egan's science heavy oeuvre Her survey of the author's career covers novels like Permutation City and Schild's Ladder and the Hugo Award winning novella Oceanic analyzing how Egan used cutting edge scientific theory to explore ethical questions and the nature of humanity As Burnham shows Egan's collected works constitute a bold artistic statement that narratives of science are equal to those of poetry and drama and that science holds a place in the human condition as exalted as religion or art The volume includes a rare interview with the famously press shy Egan covering his works themes intellectual interests and thought processes

Dichronauts Greg Egan, 2017-07-11 Seth is a surveyor along with his friend Theo a leech like creature running through his skull who tells Seth what lies to his left and right Theo in turn relies on Seth for mobility and for ordinary vision looking forwards and backwards Like everyone else in their world they are symbionts depending on each other to survive In the universe containing Seth's world light cannot travel in all directions there is a dark cone to the north and south Seth can only face to the east or the west if he tips his head backwards If he starts to turn to the north or south his body stretches out across the landscape and to rotate as far as north north east is every bit as impossible as accelerating to the speed of light Every living thing in Seth's world is in a state of perpetual migration as they follow the sun's shifting orbit and the narrow

habitable zone it creates Cities are being constantly disassembled at one edge and rebuilt at the other with surveyors mapping safe routes ahead But when Seth and Theo join an expedition to the edge of the habitable zone they discover a terrifying threat a fissure in the surface of the world so deep and wide that no one can perceive its limits As the habitable zone continues to move the migration will soon be blocked by this unbridgeable void and the expedition has only one option to save its city from annihilation descend into the unknown

Conscious Action Theory Wolfgang Baer,2019-11-20 Conscious Action Theory provides a logical unification between the spirit and the material by identifying reality as an event that processes personal experiences into explanatory memories from which personal experiences are regenerated in a never ending cycle of activity Baer explores the idea that our personal feelings are undeniable facts that have been systematically excluded from the basic sciences thereby leaving us with a schizophrenic division between objective materialism and spiritual idealism Cognitive Action Theory CAT achieves this unification by recognizing that the observer s existence is the foundational premise underlying all scientific inquiry It develops as an event oriented physical theory in which the first person observer is central By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth all systems are observers and exhibit some form of internal awareness Events not the objects appearing in them are the fundamental building blocks of reality The book is comprised of three parts the first addresses the paradigm shift from an object to an event oriented world view the second develops the foundations of action physics for an event oriented world view and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world
