Making Geometry Come Alive Alfred S. Posamentier,2000-07-22 Activities in Geometry is a set of versatile enrichment exercises that covers a very broad range of topics in geometry Euclidean post Euclidean and non Euclidean Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to students and show them that there is much

more to geometry than proving theorems. To demonstrate this aspect of geometry, it is necessary for the investigation to be quite different from what students encounter in their basal texts, different in both substance and form. Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject.

Hands-On Geometry Christopher M. Freeman, 2021-09-09. Put compasses into your students' hands and behold the results. Hands On Geometry teaches students to draw accurate constructions of equilateral triangles, squares, and regular hexagons, octagons, and dodecagons; to construct kites and use their diagonals to construct altitudes, angle bisectors, perpendicular bisectors, and the inscribed and circumscribed circles of any triangle; to construct perpendicular lines and rectangles, parallel lines and parallelograms; and to construct a regular pentagon and a golden rectangle. Students will enjoy fulfilling high standards of precision with these hands-on activities. Hands On Geometry provides the background students need to become exceptionally well prepared for a formal geometry class. The book provides an easy way to differentiate instruction. Because the lessons are self-explanatory, students can proceed at their own pace and the finished constructions can be assessed at a glance. Grades 4-6.
