Best Practices for State Assessment Systems, Part I National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Best Practices for State Assessment Systems: Improving Assessment While Revisiting Standards, 2010-07-28 Educators and policy makers in the United States have relied on tests to measure educational progress for more than 150 years During the twentieth century technical advances such as machines for automatic scoring and computer based scoring and reporting have supported states in a growing reliance on standardized tests for statewide accountability State assessment data have been cited as evidence for claims about many achievements of public education and the tests have also been blamed for significant failings As standards come under new scrutiny so too do the assessments that measure their results The goal for this workshop the first of two was to collect information and perspectives on assessment that could be of use to state officials and others as they review current assessment practices and consider improvements

Developing Assessments for the Next Generation Science Standards National Research Council,Division of Behavioral

and Social Sciences and Education, Board on Science Education, Board on Testing and Assessment, Committee on Developing Assessments of Science Proficiency in K-12, 2014-05-29 Assessments understood as tools for tracking what and how well students have learned play a critical role in the classroom. Developing Assessments for the Next Generation Science Standards develops an approach to science assessment to meet the vision of science education for the future as it has been elaborated in A Framework for K 12 Science Education Framework and Next Generation Science Standards NGSS. These documents are brand new and the changes they call for are barely under way but the new assessments will be needed as soon as states and districts begin the process of implementing the NGSS and changing their approach to science education. The new Framework and the NGSS are designed to guide educators in significantly altering the way K 12 science is taught. The Framework is aimed at making science education more closely resemble the way scientists actually work and think and making instruction reflect research on learning that demonstrates the importance of building coherent understandings over time. It structures science education around three dimensions: the practices through which scientists and engineers do their work, the key crosscutting concepts that cut across disciplines and the core ideas of the disciplines and argues that they should be interwoven in every aspect of science education building in sophistication as students progress through grades K 12. Developing Assessments for the Next Generation Science Standards recommends strategies for developing assessments that yield valid measures of student proficiency in science as described in the new Framework. This report reviews recent and current work in science assessment to determine which aspects of the Framework's vision can be assessed with available techniques and what additional research and development will be needed to support an assessment system that fully meets that vision. The report offers a systems approach to science assessment in which a range of assessment strategies are designed to answer different kinds of questions with appropriate degrees of specificity and provide results that complement one another. Developing Assessments for the Next Generation Science Standards makes the case that a science assessment system that meets the Framework's vision should consist of assessments designed to support classroom instruction, assessments designed to monitor science learning on a broader scale and indicators designed to track opportunity to learn. New standards for science education make clear that new modes of assessment designed to measure the integrated learning they promote are essential. The recommendations of this report will be key to making sure that the dramatic changes in curriculum and instruction signaled by Framework and the NGSS reduce inequities in science education and raise the level of science education for all students. *Publications of the National Bureau of Standards, 1976 Catalog* United States.
