### **Machine Learning in**

**Complex Networks** Thiago Christiano Silva, Liang Zhao, 2016-01-28 This book presents the features and advantages offered by complex networks in the machine learning domain In the first part an overview on complex networks and network based machine learning is presented offering necessary background material In the second part we describe in details some specific techniques based on complex networks for supervised non supervised and semi supervised learning Particularly a stochastic particle competition technique for both non supervised and semi supervised learning using a stochastic nonlinear dynamical system is described in details Moreover an analytical analysis is supplied which enables one to predict the behavior of the proposed technique In addition data reliability issues are explored in semi supervised learning Such matter has practical importance and is not often found in the literature With the goal of validating these techniques for solving real problems simulations on broadly accepted databases are conducted Still in this book we present a hybrid supervised classification technique that combines both low and high orders of learning The low level term can be implemented by any classification technique while the high level term is realized by the extraction of features of the underlying network constructed from the input data Thus the former classifies the test instances by their physical features while the latter measures the compliance of the test instances with the pattern formation of the data We show that the high level technique can realize classification according to the semantic meaning of the data This book intends to combine two widely studied

research areas machine learning and complex networks which in turn will generate broad interests to scientific community mainly to computer science and engineering areas     Principles of Knowledge Representation and Reasoning Luigia Carlucci Aiello,Jon Doyle,Stuart Charles Shapiro,1996
