Access Control | PAC 512 Two-Door Controller Series

Overview

The PAC 512 and the PAC 512IP control all aspects of two secure doors, with up to two card readers installed as entry and exit readers on each door. This includes support for a door strike to lock and unlock the door and a door contact to detect the doors position. Each door also has a programmable auxiliary input that may be used for alarm system integration, and an auxiliary output that enables a buzzer or strobe when security is breached or a door is left open. A tamper input enables the monitoring of a enclosure door, and an override input that will release both doors. In the event of communication loss, the PAC 512 allows all local functionality to continue until the server connection is restored.

With unprecedented scalability and flexibility, a Stanley PAC access control system can consist of just PAC 512-series access controllers, or PAC 512s managed by an Access and Alarm Server (PAC 500). When operating in conjunction with a PAC 500, the PAC 512 serves as part of an integrated solution that can include both input (PAC 520) and output (PAC 530) controllers, elevator control and sophisticated anti-passback capabilities providing a scalable solution for even the largest applications.

The Readykey™ Controller Retrofit Kit enables the conversion of existing K2100/K2200 controllers installed since 1990, to the new PAC 512 series. Utilizing the existing enclosure and power supply, the kit replaces the legacy controller with new PAC512s. The kit preserves all the existing infrastructure investment and maximizes the value of existing equipment by maintaining the power supply, cabling, readers and without re-enrolling cardholders.
