

**Starry Night Student Exercise—Answer Sheet:
The Rings of Saturn**

1. On this date, is the tilt of Saturn's rings, relative to your point of view (the inclination), very great or very small?

2. What is the date that Saturn's rings appear edge-on? With the rings in this orientation, how might observations of other nearby objects be affected?

3. What can you say about the thickness of Saturn's rings compared to the planet itself? (Try zooming in using the + or - buttons in the ZOOM window in the upper right to get a closer view.)

4. As you watched Saturn, its size appeared to fluctuate from slightly larger to slightly smaller. What could be causing the apparent change in size of Saturn? (Think about the orbits of Earth and Saturn and the fact that this fluctuation repeats every year.)

5. What is the approximate date at which Saturn's rings are tilted their maximum amount from edge-on?

6. For this date, describe how many times bigger or smaller the diameter of Saturn's rings is (from outer edge to outer edge) compared to the diameter of Saturn.

7. Based on the amount of time between no tilt and maximum tilt, predict when you think the next ring plane crossing will occur.

8. What is the next date when Saturn's rings again appear edge-on?

9. What is the interval between the two dates when Saturn's rings appear edge-on? How close is this to the date you predicted in question 7?
