

States of Matter & Phase Changes

Why?

Most substances go through a phase change when heated or cooled. Molecules of a substance are held together in either the solid, liquid, or gaseous phase by intermolecular forces. It is necessary to discuss what is occurring at the molecular level in order to explain how an ice cube is melted or how water is boiled.

New Concepts

- Heating / cooling curves
- Intermolecular Forces

Learning Objective:

- To determine what is occurring on the molecular level during a phase change

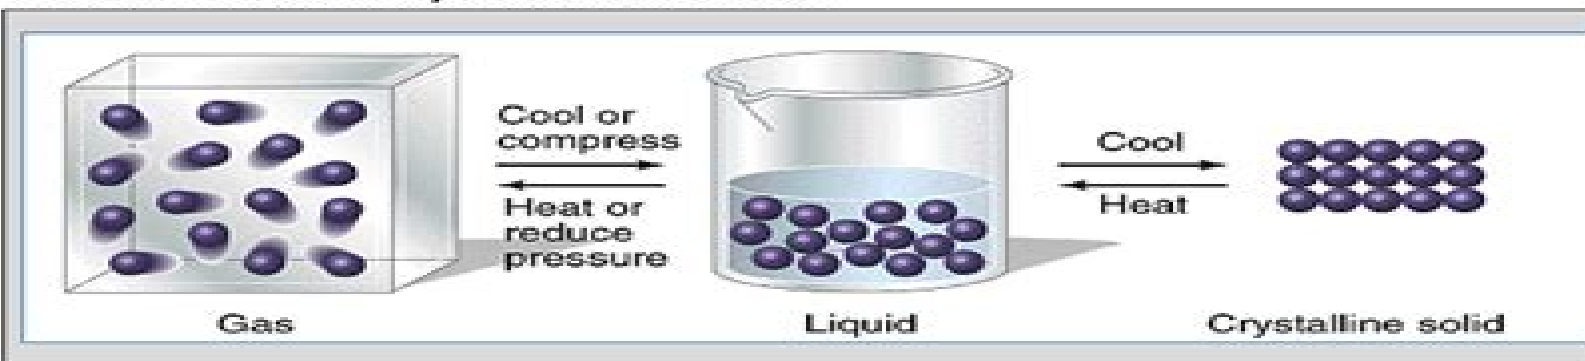

Success Criteria

- Students will be able to construct their own heating or cooling curve when given the temperatures at which phase changes occur.
- Students will be able to explain the heating curve on the micro-view.

Prerequisites

- Temperature (average kinetic energy)
- Phases of matter: solid, liquid, gas
- Molecules (particles)

Model 1: Kinetic Theory and States of Matter
